We live in a community that is within 200 feet of the railroad tracks that will carry the proposed five trains per week carrying millions of gallons of flammable oil. Not only will these proven dangerous tankers pass through our community, they will travel through the heart of many cities along their route.

Railroads are the most expensive and dangerous way of transporting these explosives. Yet, the railroad lobby was successful in getting Obama to veto the much safer Keystone Pipeline. Do you think Warren Buffet (Berkshire Hathaway BSNF Railroad shares tracks with Union Pacific) influenced Obama?

Please say NO to the railroad lobby and say YES to the millions of people who in live in jeopardy near the railroad tracks. This danger is magnified by the recent terrorism activities we are experiencing.
