Dear Murray Wilson,

I hope you will reject the Phillip 66 train offloading facility in Santa Maria. The consequences of one long oil train per day transversing the length of California will severely impact Californians, while the only ones to benefit will be a few Phillip 66 employees. The carcinogens released into the air are a known harmful pollutant under the environmental impact agency and the residents of Nipomo strongly oppose this danger to their community. Not to mention, the dune environment that holds the refinery is home to endangered lupines. The coast does not need this disturbance. The 50 temporary jobs would not benefit the local economy. Please reject the proposition! NIC-01

Sincerely yours,

Lauren Nichole,
Resident
