Dear Mr. Wilson,

I write to you today to express my objection to the Phillips 66 Santa Maria Refinery. I live in Berkeley CA where I am a full-time environmental and civil engineering student. This project will bring increased amounts of dangerous crude through my city, putting my School, my Friends, and my entire community at risk.

I ask that you take a closer look at the EIR because it omits important data about crude rail accidents in 2013-14. Furthermore, the toxic emissions resulting from this project pose a serious threat to community health. ADW-01

But its not just about my community and your community, this is about our global community. If you approve this project, you will enable further climate change, which will have incredible social and economic costs.

Please stand on the right side of history.

Respectfully,

Wes Adrianson
