Dear Mr. Wilson,

I am writing to express concern for the Proposed Phillips 66 oil train offloading facility in Santa Maria.

Crude oil trains threaten the safety of families along rail routes. Derailments, spills, explosions, and fires are all very real threats.

EDMJ-01

Oil trains threaten California water supplies. A derailment near a watershed could destroy water resources.

Oil trains create toxic air pollution. Volatile toxic compounds can leak out of train cars.

Additionally, tar sands release more carbon into the atmosphere than conventional oil.

Please, do not endanger innocent people.

Regards,

Jacob [illegible]
