Please note that evaporation readings were collected only three days per week from September 1 through October 19. Beginning October 20, evaporation data collection resumed on a daily basis. As a result, calculated lake evaporation, daily outflow, and stream inflow values for this period may be affected and should be interpreted with this limitation in mind.

*Note: Based on daily operator log sheets, a capacity decrease of approximately 1800 acre-feet was reported between 3/31/03 and 4/01/03. According to Ron Coleman, the supervising operator for the Lopez Reservoir, this was the result of implementing a new capacity table on April 1, 2003. According to Ron, implementation of the new capacity table also resulted in daily reporting of lake levels based on a new datum (i.e. adding 2.60' to elevations read on the previous datum) and reporting the daily stored volume based on the new rating table.

Based on this understanding, the actual change in capacity between 3/31/03 and 4/01/03 was calculated directly, on the basis of adjusting the elevation recorded for 3/31/03 to the new datum (i.e. adding 2.60') and reading the capacity in storage from the new table for that elevation. When this procedure is used, the adjusted elevation on 3/31/03 would be 498.89', with a storage volume of 30,526 acre-feet, based on the new table. When this adjustment is made, it appears that the lake dropped about 0.01' between 3/31/03 and 4/01/03 and that the change in capacity was approximately 7.0 acre-feet. It should be noted that the net capacity change is also 7.0 acre-feet when the lake level reading for 4/01/03 is adjusted to the previous datum and the old capacity table is used.
