Dear Mr. Wilson,

I write to voice my objection to the Phillips 66 Santa Maria Refinery oil by rail project. I am a student in UC Berkeley studying environmental science, where I am constantly learning of the extremely complicated web of problems that are imposed upon every community by the fossil fuel industry. This project is a danger to the communities in the vicinity of the rail road as well as communities across the globe who face the injustice of impending climate change. The damage that this project can bring to all of our communities is <u>not</u> worth taking the risk. MAE-01

In addition to threatening the health and safety of the large amount of communities that live along rail routes, oil trains threaten water supplies and cause air pollution which is detrimental to everyone, including yourself. We cannot afford to deepen the climate crisis by encouraging development of the fossil fuel industry.

Respectfully Yours,

Eva Malis

Dear Dr. Wilson,

I wish to give my opinion on the issue of a Sierra Leone Petroleum Refinery in the budget in the Revolving Budget Supplying environmental-friendly water I am concerned about the changing environmental conditions of people and to support a pro-poor community by the total development. This project is a danger to the communities in the vicinity of the refinery as the communities were the poor who can ill afford to implement these

---

but would ruining the risk.

In addition to INCREASING the health and safety of the large amount of communities that are already vulnerable, as Sierra Leone's water supply and the pollution which is detrimental to everyone including children who cannot afford to access the clinics which has the supply development of the local industry.
