Dear Mr. Wilson,

I am extremely concerned about the proposed oil by rail project at the Phillips 66 Santa Maria Refinery. I am currently a student attending the University of California, Santa Barbara in Santa Barbara county. I strongly oppose the proposed construction and use of railroad systems to transport oil products to the suggested refinery. I am extremely worried about the serious health and safety threats these railway systems may pose as they transport oil products alongside fragile ecosystems, such as the highly-treasured ocean bordering the proposed railway. I am also concerned about the possible health threats and decreased air quality that may severely impact the overall health of local residents. I urge you to please take into consideration the disastrous consequences that may result from the proposed rail project at the Phillips 66 Santa Maria Refinery, and realize that we, as a community, are opposed to and reject this construction project.

PAA-01

Thank you,

Abi Pastrana
