

Huasna oil drilling

John,

My grandfather purchased the Tar Springs Ranch in the mid 1940's. It is and is still to this day a working cattle ranch. Over the years this valley has grown with lots of new people, ranches, homes and alot of traffic. On any given day we might have cattle trucks, construction trucks, cement trucks, bikers, tourists, local commuters, hay trucks, and all the other traffic from every day life in the Huasna. We are very concerned about more traffic, fire hazards due to oil drilling, our water supply being contaminated by oil and residue, just to name a few. Our water at best is not that great, let alone the little amount that each home has to use if we don't have a rainy year. With this oil project our property values will go down. There are alot of homes on hold already due to the possibility of oil drilling. Who wants to buy property next to an oil project and be subjected to the noise, smell, road traffic, etc. All project related traffic needs to be funded with a volunteer fire dept in the Huasna so that we can all be safe if and when a fire should occur. The time for Cal Fire to get to us is over 45 min. at best, very reassuring! It doesn't seem to me that the county is taking all our concerns seriously! I hope you will finally address all this concerns in a timely manner.
