Excelaron Project – DEIR comment:

Clearly, the “ No Project Alternative” would be the superior alternative as recommended in the DEIR.

How can a permit be issued with all the Class I impacts?

This is an agricultural/ residential area, NOT uninhabited open space. This project will impact everything.

Oil spills & wildfires are unavoidable impacts, and they **WILL** happen, and there is **NO** going back to “pristine” after they occur. We need to preserve what little bit of country that is left in this county.

As a resident of the Huasna Valley, I am very upset that the planning department would even consider a permit with such high impacts to residents, wildlife, vegetation, agricultural resources, air quality, water, noise, property values, and scenic vistas.

Don't let this happen to our beautiful valley.
