

Oil drilling in Huasna valley

Richard Ryan o jdmckenzie

John.

This whole oil drilling project has seemed suspicious from the very start, what with the re appearance of companies under different disguises , etc., not only does it seem itself like a big facade for something quite larger than what has been proposed, the whole EIR seems quite shaky .

My concerns for our quality of life are many. The uncertainties of traffic routing, fire threats and pollution of our water supply are only some of the things that haven't been addressed with any commitment at any meeting I have attended. What guarantees do we have that ALL related traffic will go by way of 166. Our narrow and windy road is already a hazard in it own rite, without all the work traffic. .. How will fire response vehicles get out there in a timely fashion? Shouldn't some monies be set aside for a fire station out there? Why are only 90,000gals of water prescribed instead of the mitigated allowance of 240,000.??

How will any mitigations be monitored ? Should that not be done by an independent party paid for by the oil company?

My list of questions could go on but for the sake of my time, i will cut this short and request that you do the right thing and stop this madness before it becomes an embarrassment for the county and a thorn in the sides of all the residents of Huasna Valley

Sincerely

Richard Ryan.
