Subject: P66 Oil Train Plan Project

I recently read the MRWG Newsletter and have been aware of this proposal to move more oil train cars through our community. I live less than a mile from the train tracks and am definitely worried if this plan gets approved. I've seen various oil train wrecks in TV and the severe damage they can cause. I'm opposed to the increase in rail traffic thus added noise. I'm opposed to the potential increase in train accidents, just due to increased oil cars, which could cause explosions resulting in deaths, toxic fumes and forest fires to name a few concerns. With only two lane freeways we could never evacuate people in a timely manner.

We live in such a beautiful area here on the California Central Coast and I think it's crazy to even consider this proposal which could severely impact or quality of life.

Please DO NOT let this proposal pass.
