Subject: Railspur

This project has many risks to the citizens of our county.

The concerns I have are many but briefly they are:

Air pollution

Noise pollution

Visual pollution for those of us living on the Nipomo mesa Accidental risks and associated pollution Health risks

And what does SLO County get - a very limited number of local jobs.

And why are we even having this conversation in SLO County.

It is simply because of incompetence of our national leaders who failed to pass the Keystone Pipeline again this week. Pipelines pose limited environmental or health/safety risk compared to oil by rail.

Additionally America lost an economic opportunity to export refined oil from the gulf region which would create many jobs and help our domestic economy.

Thus my family is potentially exposed to many hazards and risks due to failures at the national level. I am hopeful that our local leadership can protect my family and other members of our County from these unnecessary risks.
