Subject: Rail Spur Extension at the Phillips 66 Refinery

Dear Mr. Wilson,

I am very concerned about the negative impact that the Rail Spur Extension at the Phillips 66 Refinery will have on the health and safety of our community.

Like many others, our family moved to this area for the clean air and safety that this area is known for, as well as its strong commitment to environmental issues. Although the refinery predates much of the development in the area, we understood that as it was now a growing residential local, and that being strictly regulated, the inward and outward transport of the petroleum products would be done safely and seamlessly through the existing pipelines.

WED-01

I understand that operational activities associated with the Rail Spur Project would generate criteria pollutant emissions that exceed SLOCAPD thresholds and that trains will emit toxic emissions. If this project is allowed to proceed it will have a deleterious effect on the health of the residents due to increased pollutants and toxic emissions; as well as the danger of a catastrophic event due to a rail accident or system failure at the refinery. We are requesting that you not allow this project to proceed because of the potential negative health effects on the residents of the community.

WED-02

Sincerely,
Daniel Weitz
