Proposed Las Pilitas Quarry Project: EIR Comments

Please address the following concerns I have regarding the proposed EIR for the Las Pilitas Quarry Project.

IMPACT Dust Generation. "Dust will be generated during the quarry development and use which could adversely affect agricultural resources."

What is the number of ppm in the air quality will be present? How does this compare to the air quality south of the Oceano Dunes?

What are the prevailing winds and which populations will be affected?

Will bicyclist riding along HW 58 be subjected to dust in the air or accumulated dust on the shoulder of the road as it migrates off the truck trailers?

How many cases of Valley Fever are projected due to this project?

IMPACT: Recreation

The EIR summarizes by referring to the "non-residential nature of this quarry".

The number of trucks traveling along HW 58 will greatly impact bicycle traffic along this portion of HW 58. San Luis Obispo County is considered a destination for tourist coming to ride on our country roads. How will truck traffic impact the safety of bicyclists on HW 58?

IMPACT: Public Services and Utilities. "This project, along with others in the area, will have a cumulative effect on road facilities as well as police and fire protection, and will not affect schools."

How will the large number of truck trips each day "not affect Santa Margarita Elementary School children."?
