I am very much AGAINST this proposed project. I am concerned about the environmental, cultural, medical, and social impact of this project to our Santa Margarita neighborhood.

Concerns:

Will Native American archeology be disturbed/damaged/lost with the instillation of this project?

What will be left at the site after 30 years of excavation?

What long-term effect will this project have on wildlife and plant life in the area?

How will over 200 daily trips by large trucks affect the roads, traffic, safety, and noise levels for those living in the Santa Margarita community?

How will excavation, blasting, noise levels, pollutants, and airborne toxins affect our community in the short and long term?

What impact will the water usage of this project have on those living in the community?

I believe and fear that a project of this size will forever negatively impact the quality of life for Santa Margarita residents. I love the quiet, rural nature of my Santa Margarita community. Although the owners of this project believe they can mitigate the negative impacts of this projects, there is no way that as truck after truck roll through town and blast after explosive blast will not change Santa Margarita as we now know it. As the EIR moves forward, please do not forget that negative PERSONAL impact that this project will have on the lives of those living in the beautiful and loved community. This project will jeopardize my quality of life and that of my family!
