Dear Sirs

Giving a permit to operate loaded trucks through Santa Margarita every two and a half minutes is an impossible thing to imagine, it would be worse than living on a freeway!! , And for thirty years no less. The very notion of that many more trucks with what already goes through, from the existing quarry is impossible! The impact on our lives is beyond calculation. It would be impossible to safely cross El Camino Real (hwy 58) in Santa Margarita. Hwy 58 is already dangerous to drive on now; it is narrow, winding and hard to see around corners... Living around asphalt and concrete recycling facility is dusty, noisy, disturbing not counting blasting!! The exorbitant use of water, which I believe would come out of Santa Margarita Lake ,as the water from the new pipe line would be to expensive, as we all know. My biggest concerns are the safety of the children in Santa Margarita, who have to cross hwy 58 to get to the post office and stores.
