To Whom it may concern:

Regarding the proposed quarry project near Highway 58 , Santa Margarita, I have some issues that need to be addressed. My primary concern is new amount of truck traffic that would be put on that road. That part of the Highway 58 near the Salinas bridge crossing is full of tight turns with minimal shoulders . I personally use that road to visit friends there and travel to Creston via 126 and use great care when there are no cars or trucks sharing the road . The amount of proposed truck traffic is simply unacceptable with this project.

Secondly , from an ecological standpoint , the Salinas river is a beautiful pristine environment , even as it flows under the Highway 58 bridge. If the proposed quarry were to go ahead there , that natural environment would be lost. I have received permission from property owners in the area , to use the river for boating , and spending leisure time and if that experience would be lost by many if the quarry were to go through.

There are too many other reasons not to build this quarry.

Sincerely ,

Allen A. Jacobs
