The California Environmental Quality Act (CEQA) requires all state and local agencies to consider and mitigate environmental impacts for their own actions and when permitting private projects. The Act also requires that an environmental impact report (EIR) be prepared for all actions that may significantly affect the quality of the environment. The information you provide on this form will help the Department of Planning and Building determine whether or not your project will significantly affect the quality of the environment.

To ensure that your environmental review is completed as quickly as possible, please remember to:

- a. Answer **ALL** of the questions as accurately and completely as possible.
- b. Include any additional information or explanations where you believe it would be helpful or where required. Include additional pages if needed.
- c. If you are requesting a land division or a re-zoning, be sure to include complete information about future development that may result from the proposed land division or rezoning.
- d. Include references to any reports or studies you are aware of that might be relevant to the questions asked or the answers you provide.

Should a determination be made that the information is inaccurate or insufficient, you will be required to submit additional information upon request.

Physical Site Characteristic Information

Your site plan will also need to show the information requested here:

1. Describe the topography of the site:
Level to gently rolling, 0-10% slopes: _____ acres
Moderate slopes of 10-30%: _____ acres
Steep slopes over 30%: _____ acres
2. Are there any springs, streams, lakes or marshes on or near the site? Yes No
If yes, please describe: _____
3. Are there any flooding problems on the site or in the surrounding area? Yes No
If yes, please describe: _____
4. Has a drainage plan been prepared? Yes No
If yes, please include with application.
5. Has there been any grading or earthwork on the project site? Yes No
If yes, please explain: _____
6. Has a grading plan been prepared? Yes No
If yes, please include with application.
7. Are there any sewer ponds/waste disposal sites on/adjacent to the project? Yes No
8. Is a railroad or highway within 300 feet of your project site? Yes No
9. Can the proposed project be seen from surrounding public roads? Yes No
If yes, please list: _____

Water Supply Information

1. What type of water supply is proposed?
 Individual well Shared well Community water system
2. What is the proposed use of the water?
 Residential Agricultural - Explain _____
 Commercial/Office - Explain _____

3. What is the expected daily water demand associated with the project? _____
4. How many service connections will be required? _____
5. Do operable water facilities exist on the site?
 Yes No If yes, please describe: _____
6. Has there been a sustained yield test on proposed or existing wells?
 Yes No If yes, please attach.
7. Does water meet the Health Agency's quality requirements?
Bacteriological? Yes No
Chemical? Yes No
Physical Yes No
Water analysis report submitted? Yes No
8. Please check if any of the following have been completed on the subject property and/or submitted to County Environmental Health.
 Well Driller's Letter Water Quality Analysis OK or Problems

Please attach any letters or documents to verify that water is available for the proposed project.

Sewage Disposal Information

If an on-site (individual) subsurface sewage disposal system will be used:

1. Has an engineered percolation test been accomplished?
 Yes No If yes, please attach a copy.
2. What is the distance from proposed leach field to any neighboring water wells? _____ feet
3. Will subsurface drainage result in the possibility of effluent reappearing in surface water or on adjacent lands, due to steep slopes, impervious soil layers or other existing conditions?
 Yes No
4. Has a piezometer test been completed?
 Yes No
5. Will a Waste Discharge Permit from the Regional Water Quality Control Board be required?
 Yes No (*a waste discharge permit is typically needed when you exceed 2,500 gallons per day*)

If a community sewage disposal system is to be used:

1. Is this project to be connected to an existing sewer line? Yes No
Distance to nearest sewer line: _____ Location of connection: _____
2. What is the amount of proposed flow? _____ G.P.D.
3. Does the existing collection treatment and disposal system have adequate additional capacity to accept the proposed flow? Yes No

INTRODUCTION:

Verizon Wireless is formally requesting approval of a Land Use Permit for the installation of a new wireless telecommunications facility at 2950 Santa Rosa Creek Road, Cambria. The development of this facility will further enhance Verizon's Northern California wireless network by allowing its customers seamless access to Verizon's nationwide network of services. Similar to the other existing wireless service providers, each Verizon wireless communication facility, or base station, will consist of transmitting and receiving antennas mounted on a communication tower or other suitable structure. It will also consist of radios for receiving and transmitting wireless communications and complex electronic equipment to operate the radios, interface with other wireless communication facilities, provide connections to the landline telephone network, and link the cell site with the main switching center. The Project Description provided herein is for an individual site, which will become an integral part of Verizon's wireless network.

PROJECT DESCRIPTION:

The proposed project involves mounting a total of two (2) omni whip antennas on an existing chimney on an existing building. Two (2) equipment cabinets and all other associated equipment will be installed within the existing fenced compound. The project has been designed so that all of the antennas will be screened from view in a manner that will minimize any aesthetic impacts from nearby right-of-ways and the surrounding properties, as well as maintain design compatibility with the area.

The proposed facility is unmanned and only requires periodic maintenance, which equates to one trip approximately every four to six weeks. The proposed communication facility will not result in conditions or circumstances contrary to the public health, safety, and the general welfare. All proposed equipment associated with the telecommunication structure operates quietly or virtually noise free and does not emit fumes, smoke or odors that could be considered objectionable. Not only will this proposal benefit current and future subscribers by providing superior service through state-of-the-art communication technology, but will also provide emergency services to the County. Wireless communication is a vital element of the communications network for both emergency services and public welfare.

SITE COVERAGE/SELECTION:

This cell site is a "coverage" site, meaning that there is currently no Verizon coverage within the general area. This location is ideally suited to provide the coverage required by our ever-increasing customer base as well as to provide emergency services to Cambria and the County of San Luis Obispo. The subject property and existing facility is able to accommodate antennas that can be concealed from view without compromising the aesthetics of the property or negatively impacting surrounding properties.

OVERVIEW OF SITE DESIGN/LOCATION CRITERIA:

The network of VZW cell sites throughout the region is "locationally dependent," meaning that there is a necessary and logical interrelationship between each cell site. Eliminating or relocating a single cell site can lead to gaps in the system and prohibit VZW from providing

uninterrupted service to customers in a defined coverage area. Further, the elimination or relocation of a cell site will most often have a "domino" effect on other cell site locations and necessitate significant design changes or modifications to the network.

In identifying the proposed WTF location, VZW network deployment personnel have selected a site that not only meets the technical objectives of RF engineering, but concurrently provides the best siting option with regard to other key criteria that include, but are not limited to: accessibility, utility connections, zoning compatibility, liability and risk assessment, site acquisition, maintenance and construction costs.

ALTERNATIVE SITE ANALYSIS:

Verizon always explores non-residential properties for interest and locating of a new facility, but if there are no viable non-residential options they would then proceed to public right-of-way installations. Fortunately, there is a non-residential option, which is the Coast Union High School and they are interested in leasing space to accommodate a new Verizon Telecommunications Facility.

PROJECT BENEFITS:

The proposed project will provide the following community benefits:

- Telephone, data transmission, paging, short message functions, and voicemail services and reliable services for emergency purposes.
- Enhanced emergency response communications for police, fire, paramedics and other emergency services.
- Better voice and reception quality.

REGULATING AGENCIES:

Verizon Wireless is regulated by the Federal Communications Commission (FCC) and is authorized to operate. Verizon Wireless' telecommunications facilities operate at the lowest possible power levels and are well below established standards used by the FCC for safe human exposure to radio frequency electromagnetic fields. These standards have been tested and proven safe by the American National Standards Institute (ANSI) and the Institute of Electrical and Electronics Engineers (IEEE).

The proposed communications facility will operate in full compliance with the U.S. standards for radio frequency emissions as published by the American National Standards Institute (ANSI). The ANSI was developed by the committee composed of 125 scientists from universities, non-profit laboratories and Federal Health Laboratories (FDA, NIOSH and EPA). In 1992 the ANSI established, as a public safety standard, a maximum exposure level to radio frequency emissions of 1000 microwatts per centimeter squared (1,000 uW/cm²).
