

Condition 75**APCD Equipment Requirements**

Prior to initiating grading activities, the proponent's contractor or engineer shall:

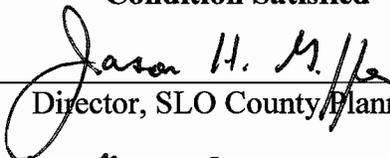

- a. Include the following specifications on all project plans: One catalyzed diesel particulate filter (CDPF) shall be used on the piece of equipment estimated to generate the greatest emissions. If a CDPF is unsuitable for the potential equipment to be controlled, five diesel oxidation catalysts (DOC) shall be used.
- b. Identify equipment to be operated during construction as early as possible in order to place the order for the appropriate filter and avoid any project delays. This is necessary so that contractors bidding on the project can include the purchase, proper installation, and maintenance costs in their bids.
- c. Contact the SLOAPCD Compliance Division to initiate implementation of this mitigation measure at least two months prior to start of construction.

Evidence of compliance:

The project specifications (Contract Documents) for the Los Osos Wastewater Project incorporate the APCD Equipment Requirements noted in Condition 75. Specifically, Section 1060-1.03 V attached hereto includes the above requirements in their entirety.

In addition, documentation is attached which confirms this requirement has been initiated with APCD.

Condition Satisfied

Hi Kerry: Pursuant to Eric's email, I just wanted to confirm with you that Public Works has contacted the District with reference to condition 76.c below. We are working through the items in addition to the odor control plan.

Thank you -

Tim

Subject: LOWWP CAMP

Greetings Tim,

We're working with Planning Dept. on Coastal Development Permit condition compliance for Los Osos. Condition 75 states:

Prior to initiating grading activities, the proponent's contractor or engineer shall:

- a. Include the following specifications on all project plans: One catalyzed diesel particulate filter (CDPF) shall be used on the piece of equipment estimated to generate the greatest emissions. If a CDPF is unsuitable for the potential equipment to be controlled, five diesel oxidation catalysts (DOC) shall be used.*
- b. Identify equipment to be operated during construction as early as possible in order to place the order for the appropriate filter and avoid any project delays. This is necessary so that contractors bidding on the project can include the purchase, proper installation, and maintenance costs in their bids.*
- c. Contact the SLOAPCD Compliance Division to initiate implementation of this mitigation measure at least two months prior to start of construction.*

We provided the following as evidence of compliance:

The project specifications (Contract Documents) for the Los Osos Waste Water Project incorporate the APCD Equipment Requirements noted in Condition 75. Specifically, Section 1060-1.03 V attached hereto includes the above requirements in their entirety.

In order to sign off on this condition, Planning has asked that we provide documentation from APCD that item "c." above has been initiated with the Air District. As you know, we have been working with APCD on the CAMP for the Project. Could you please respond to this email stating we have contacted your Division to initiate this condition?

Thank you,

Eric Wier
