

Condition 104	Requirements for Agricultural Re-Use and Disposal Lines
----------------------	--

Agriculture irrigation lines and other wastewater effluent disposal lines shall be located within existing right-of-ways (including agricultural field access ways) and other areas known to not include, or that can be demonstrated to not include, cultural or biological resources. Use of the effluent shall be consistent with all other local, State, and Federal regulatory requirements including but not limited to the Conditional Waiver of Waste Discharge Requirements for Discharges from Irrigated Lands requirement of the Central Coast Regional Water Quality Control Board.

Evidence of compliance:
Addendum #1 (on file with the Department of Planning and Building) to the Los Osos Wastewater Project Final EIR was prepared to document that the location of the agriculture irrigation lines and other wastewater effluent disposal lines associated with the LOWWP (and required by the project's conditions of approval) do not meet the conditions for requiring a subsequent or supplemental EIR. The recycled water distribution lines will not result in new significant environmental impacts or change the conclusions of the previously certified Final EIR, the CEQA Findings adopted by the County, or the CEQA Findings adopted by the Coastal Commission. The recycled water distribution lines will not result in either new environmental effects or a substantial increase in the severity of previously-identified significant effects. With these results, it can be determined that the irrigation lines and effluent disposal lines located within existing right-of-ways (including agricultural field access ways) will be located in areas that do not include cultural or biological resources.

Additionally, effluent will be Disinfected Tertiary Recycled Water as defined by Section 60301.230 of Title 22 of the California Code of Regulations (as required by Condition 6).

Condition Satisfied

ADDENDUM #1

Los Osos Wastewater Project Final EIR

1. Introduction

This document is an Addendum to the Final Environmental Impact Report (Final EIR) prepared by San Luis Obispo County for the Los Osos Wastewater Project (LOWWP). The Final EIR evaluated the potential environmental effects of the LOWWP, which proposed construction and operation of a community sewer system, including a treatment plant, collection/disposal/reuse facilities, and all associated development and infrastructure.

The Final EIR was certified in 2009 by San Luis Obispo (SLO) County, which acted as the Lead Agency pursuant to the California Environmental Quality Act (CEQA) and the State CEQA Guidelines (Title 14, California Code of Regulations, Section 15300 et. seq.) §15090).

Since the certification of the Final EIR, minor additions have been made to the project description for the LOWWP. In 2009, during the public hearing and approval process, tertiary treatment of wastewater and infrastructure to deliver recycled water was added to the project description by the San Luis Obispo County Planning Commission sitting as the hearing body for the Coastal Development Permit (Attachment 1). The Planning Commission found that these project changes would have no new significant impacts and adopted CEQA Findings to support this conclusion. Subsequently, the San Luis Obispo County Board of Supervisors, hearing the application for a Coastal Development Permit on appeal, affirmed the Planning Commission's decision and adopted CEQA Findings supporting their conclusion (Attachment 2).

The Coastal Development Permit was appealed to the California Coastal Commission. The Coastal Commission which assumed CEQA Lead Agency status over the project pursuant to section 15251 (c) of the State CEQA Guidelines with their decision on January 14, 2010 to find "Substantial Issue" and hear the appeals of the Coastal Development Permit. On June 11, 2010, the Coastal Commission denied the appeals and conditionally approved the Coastal Development Permit and adopted CEQA Findings to support the project approval and associated project description changes contained in the Conditions of Approval.
