

Condition 74**Paleontological Resources**

Although unlikely, should any vertebrate fossils or potentially significant finds (e.g., numerous well-preserved invertebrate or plant fossils) be encountered by anyone working on the site, all activities in the immediate vicinity of the find are to cease until a qualified paleontologist evaluates the find for its scientific value. If deemed significant, the paleontological resource(s) shall be salvaged and deposited in an accredited and permanent scientific institution where they will be properly curated and preserved for the benefit of current and future generations.

Evidence of compliance:

Paleontological resources are not associated with aeolian dune sands, within which the collection system will be built. Soils at the treatment facility site contain clays but are also not likely to contain paleontological resources. None the less, the cultural resource monitors will stop construction in the event that fossils are uncovered during excavation, and if significant, the specimens will be documented and curated.
