Subject: Basin Management Committee Recommendations

To whom it may concern:

The Los Osos Basin Management Committee (LOBMC) understands that the update to the Los Osos Community Plan (part of the County’s Local Coastal Program) is proceeding toward hearings before the County Planning Commission and Board of Supervisors. We write to provide you information regarding LOBMC efforts to implement actions that will create a sustainable water supply for the community. We realize that a clear and accurate description of the community’s groundwater resources is fundamental to the land use planning process.

In January 2015, the Los Osos water surveyors and the County of San Luis Obispo released the Updated Basin Plan for the Los Osos Groundwater Basin (Basin Plan), detailing a series of strategies, plans and projects to manage and protect groundwater water resources in the basin. The Basin Plan is the conclusion of a multi-year planning process that first began in 2008 following the initiation of the basin adjudication.

The updated Basin Plan establishes goals, timeframes, milestones, and metrics to address basin management. The Los Osos Community Services District, Golden State Water Company and S&T Mutual Water Company, as well as the County of San Luis Obispo worked together to develop the immediate and continuing goals, and to create a framework that defines the fiscal and management authority to finance and implement the Basin Plan projects. Both the Basin Plan and the cooperative authority described in the plan were approved by the Superior Court in October, 2015. The area covered under the adjudication is termed the Plan Area in the Basin Plan (see Basin Plan Figure 10), and it fully encompasses the Urban Reserve Line.

The primary goals of the Basin Plan include halting seawater intrusion into the basin and providing sustainable water supplies for existing and future needs. Strategies outlined include:

- Implement conservation measures to minimize basin demand
- Shift pumping away from the coast and lower aquifer to halt seawater intrusion and maximize basin yield
- Beneficially use recycled water to minimize seawater intrusion
June 21, 2017
Page 2 of 5

- Reserve 20 percent of basin safe yield to create a buffer to proactively protect the basin

In September 2014, California Governor Jerry Brown signed the Sustainable Groundwater Management Act (SGMA), groundwater management legislation that strengthens local management and monitoring of groundwater basins. Since the Los Osos Groundwater Basin is adjudicated, it was specifically excluded from the requirements of SGMA in the final version of the legislation. However, the Basin Plan is compliant with the substantive requirements of SGMA, and shares common goals for basin monitoring, management, and sustainability.

**Basin Management Committee Activities**

Pursuant to the court-approved Stipulated Judgment approved in October, 2015, the water surveyors and the County of San Luis Obispo formed a Basin Management Committee (BMC) in December, 2015. In September 2016, the BMC released its first Annual Report documenting the monitoring performed and Basin Plan progress made in 2015. The 2015 Annual Report includes:

- 2015 Groundwater Production
- The status of the basin based on the metrics set in the Basin Plan
- Framework for an Adaptive Management Plan
- Update on the basin infrastructure programs identified in the Basin Plan

The BMC meets regularly to discuss progress, establish upcoming priorities, and evaluate adaptive management measures. In November, 2016, the BMC updated the current and future water projections based on current production data. A copy of the staff note is attached for reference, but the key conclusions are summarized as follows:

- The Basin Plan projected a build-out purveyor water demand of 2,100 acre feet per year (AFY)
- Based on implemented water efficiency measures and community use patterns, the current range of estimated water demands is now revised to 1,100 to 1,500 AFY, depending on the future per capita demand and total population.

**Status of Basin Infrastructure Program**

The Basin Plan provides a list of projects that comprise the Basin Infrastructure Program (Program) that were put forth to address the following immediate and continuing goals:

**Immediate Goals**

1. Halt, and to the extent possible, reverse seawater intrusion into the Basin.
2. Provide sustainable water supplies for existing residential, commercial, community and agricultural development overlying the Basin.

**Continuing Goals**

1. Maximize the reasonable and beneficial use of Basin water resources.
2. Provide sustainable water supplies for future development within Los Osos, consistent with local land use planning policies.
3. Allocate costs equitably among all parties who benefit from the Basin’s water resources, assessing special and general benefits.

The Program is divided into four parts, designated Programs A through D. Programs A and B are designed to shift groundwater production from the Lower Aquifer to the Upper Aquifer, and Programs C and D shift production within the Lower Aquifer from the Western Area to the Central and Eastern Areas, respectively. The following Table provides an overview of the status, as of March 2017, of the Projects that are currently moving forward or have been completed. Programs A and C are currently intended to balance the basin with the current population, and Programs B and D are generally intended for future development.

**Basin Management Committee Recommendations**

Future development within the Los Osos basin should be incremental and only occur after:

1. Any growth projections in the updated Los Osos Community Plan should be consistent with the water supply estimates provided in the Basin Management Plan.
2. The Community Plan should acknowledge any infrastructure projects contemplated by the Basin Plan that would require coastal planning action subject to the authority of the Coastal Commission. This provision would help expedite completion of any affected projects.
3. Amendments to the County’s Growth Management Ordinance [separate from the Community Plan/LCP] should provide a growth rate for Los Osos consistent with the adaptive management provision of the Basin Plan. In particular, the rate of growth must be set so that the monitoring provisions of the Basin Plan confirms the adequacy of a sustainable water supply in support of any contemplated future growth.

The BMC is available to provide periodic input and updates concerning groundwater basin conditions and project status. The 2016 Annual Report is expected to be released by June, 2017. Please let us know if you have any questions, or if you need more information.

Sincerely,

Rob Miller, PE
Interim Executive Director of BMC

TO: Los Osos Basin Management Committee

FROM: Rob Miller, Interim Executive Director

DATE: November 16, 2016

SUBJECT: Item 7B. – Review Future Water Demand Projections for Los Osos Community Plan

Recommendations
Receive report and provide input to staff for future action.

Discussion
The population within the Los Osos Urban Reserve Line (URL) was identified in the Basin Plan as 14,159 persons based on the 2010 Census. The build-out population was estimated at 19,850 persons. The County of San Luis Obispo has issued a Public Review Draft of the Los Osos Community Plan (Plan) and is re-evaluating the build-out potential and the population within the URL. Based on more recent information, the County has updated the build-out population to be 18,747 persons based on 7,811 dwellings at 2.4 persons per dwelling. The County has also noted a downward trend in occupancy with a current estimated rate of 2.2 persons per household. In addition, the potential for a small increase in the number of total units at build-out has been identified, from a published value of 7,811 dwellings to a new value 7,887. Using the lower density and revised dwelling count, a future population of 17,352 can be calculated. For the purposes of this update, a range of 17,000 to 18,750 persons will be used for the projected build-out population within the URL.

To further understand the population within Los Osos, the following table provides a breakdown of the existing population and future build-out population for the Water Purveyors and the population outside of the water purveyor boundaries. These values were based on Census block data and should be considered approximate.

<table>

<td>14,159</td>
<td>17,000</td>
</tr>
</tbody>
</table>

<sup>1</sup> Assumes 25 additional dwelling units outside of water purveyor boundaries with a household density of 2.2 persons per household.

<sup>2</sup> Assumes 25 additional dwelling units outside of water purveyor boundaries with a household density of 2.4 persons per household.
The 2015 Annual Report, dated September 2016, provided a summary of the 2015 water production by each Water Purveyor (Table ES-1) for a total production of 1,010 acre-feet. The summary is as follows:

- Los Osos Community Service District 510 acre-feet
- Golden State Water Company 470 acre-feet
- S&T Mutual Water Company 30 acre-feet

For 2016, water production through September is down marginally for Golden State Water Company (-4.3%) and S&T Mutual Water Company (-3.0%). LOCSD’s water production, through September, had a slight upward rebound (3.4%). The following table provides an overview of the water production through September for all three Water Purveyors.

<table>

</tbody>
</table>

Utilizing the existing population within the water purveyor service area and the 2015 water production, the existing per capita production was calculated to be 67 gpcd. It should be noted that this value includes commercial, institutional, and non-revenue water.

- 2015: 1,010 AF/365 days = 2.767 AF/day = 901,670 gpd/13,544 persons = 67 gpcd

To estimate future water production at build-out, a range of per capita demands was used as follows:

- Low range: Assume per capita demand is reduced by 10% due to the implementation of urban recycled water and further conservation measures, therefore utilize 60 gpcd.
- High range: Assume existing per capita demand increases by 10% due to changes in customer behavior during non-drought conditions, therefore utilize 73 gpcd.

Therefore, the estimated water production for the purveyors at build-out is as follows

- Low Range: 16,330 persons x 60 gpd/person = 979,800 gpd = 1,142 AFY
- High Range: 18,075 persons x 73 gpd/person = 1,319,475 gpd = 1,478 AFY

The above calculation is limited to purveyor production. It should be noted that the water production identified in the Basin Plan assumed a future of 19,850 persons with a future per
capita demand of 95 gpcd, resulting in a total future production value of 2,100 AFY. This value includes water production from private domestic wells within the URL.
