

Beach Water Quality Results 2017 to 2019

County of San Luis Obispo
Environmental Health
Questions? Call 805-781-5544

Ocean water samples are analyzed for three different types of fecal indicator bacteria. Fecal indicator bacteria indicate the possible presence of disease causing organisms. Sample results are compared to state bacteriological standards for each type of fecal indicator bacteria. If a sample does not meet the state bacteriological standards, this location will be posted with a Health Advisory indicating that water contact activities should be avoided in this area. State bacteriological standards are exceeded when:

Total coliform exceeds: 10,000 MPN
 Fecal coliform (E. coli) exceeds: 400 MPN
 Enterococcus exceeds: 104 MPN

MPN= most probable number

Station	Sampling Location Description	SampleDate	SampleTime	Parameter	Qualifier	Result	Unit	Method
AB10	350 yards west of pier (creek outfall)	1/3/2017	9:55:00	Enterococcus	=	10	CFU/100ml	Enterolert
