To whom this may concern

I am writing in response to the EIR written concerning the Diablo Canyon Nuclear Power Plant Property in SLO County.

It should be taken into serious consideration that this property has been contaminated with radioactive isotopes for 40 years. The NRC and the nuclear scientists don't tell the public this because the nuclear plant would never have been opened and should not continue to be allowed to contaminate our county just because people want to make a lot of money having a environmentally damaging jobs. There are many clean ways to make energy, money and clean green jobs.

John Goffman the nuclear scientist who discovered Pa 232, U-232. Uranium, plutonium and proved the fissionability of U-233 wrote a book talking about the damages of ionizing radiation and exposures which cause cancer. He recommended at least a 10 fold reduction of legal amounts allowed by the NRC. He did this as he researched the damages caused by the Nuclear Industry after he had worked in it for his lifetime. He wrote several books. Read them

9/25/23

before you make ignorant decisions about the property. Ionizing Radiation has been spread from ~~the~~ and vented from the reactors for 40 yrs. The nuclear engineers pretend they know what is being released. The PR liars tell you that its no more than you get from the sun.

Anti nuclear activists and John Goffman the Nuclear Scientist was not ignorant. They know the PR lies the nuclear industry tries to sell the public to do what they want.

The property should be off limits to the public for eternity. It should be given back to the Church to protect it from the ignorance of the white man. You are the ones making either an ignorant decision or the right decision for future generations. Ignorant men have already made ignorant decisions.

Try doing the right thing to be remembered by.

Sincerely Kathi DiPeri
