INDEX MAPS:

Solid black circles indicate a monument and well exists at this time. Open circles indicate we have survey information on file related to this location.

Most of the center line monument information we have has been copied and placed in this book. Some of this information has not been proven by a record of survey, tract or parcel map. It is possible to find some additional information on certain locations in the city from our old survey books.

In the past two years we have made a field check of all the center line monuments in the city. So we include these field check index sheets at the back of this book as some notes on these sheets may be of value.

We have found nails, spikes, etc., at a number of intersections in our travels that were not backed up by some form of field notes and/or ties. We do not know at this time if they represent the true center line of intersections. Those intersections are the ones in the field check index sheets not depicted by ties or field survey notes. An example would be a page that simply says: "Found nail at intersection", or "Found nail and four straddlers at intersection", etc.

For ease in intersection location, every intersection will be listed in alphabetical order to itself, e.g., "California - Monterey; Higuera - Madonna", etc. Also, generally, the intersections in any one quadrant are listed from north to south; that is, if intersection needed is at the south end (bottom) of the quadrant, it should be towards the end of the list in that quadrant, etc.

NOTE: Some intersections have more than one sheet in this book, i.e., two or more pages with the same number.

Recorded 1988.

S.W. IN TIES DISTANCES WERE MEASURED FROM EXISTING NAILS SET IN CONCRETE CURBS.

I FEEL THAT IT WOULD BE HELPFUL IF YOU — THE CITY — COULD SET A BRASS CAP IN CONG. FLUSH WITH THE A.G. TO AVOID FURTHER PUNT HOLES.
