

How to Install the Cisco AnyConnect VPN Client on Apple Devices

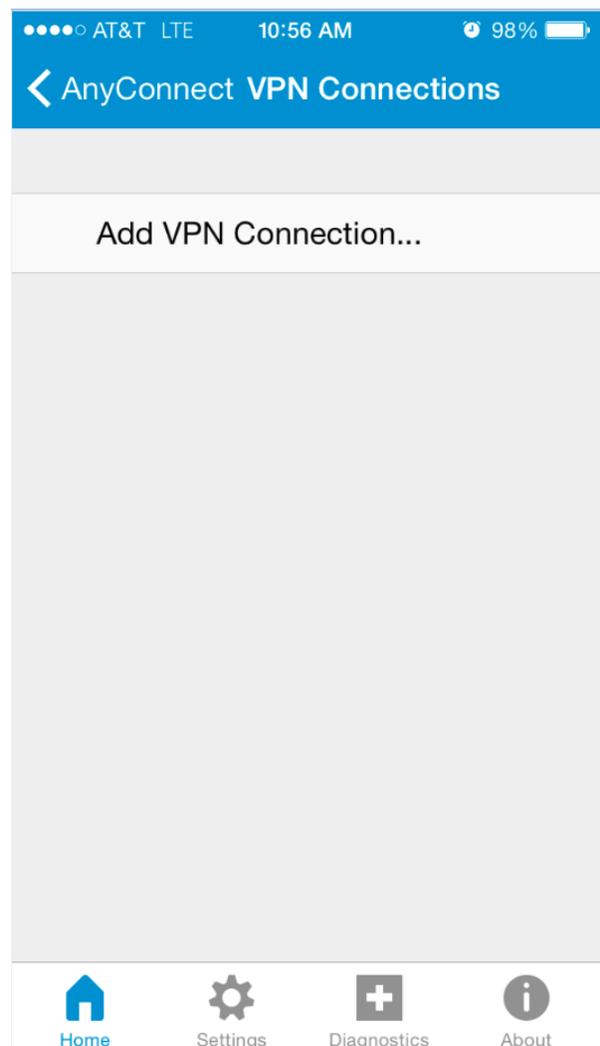

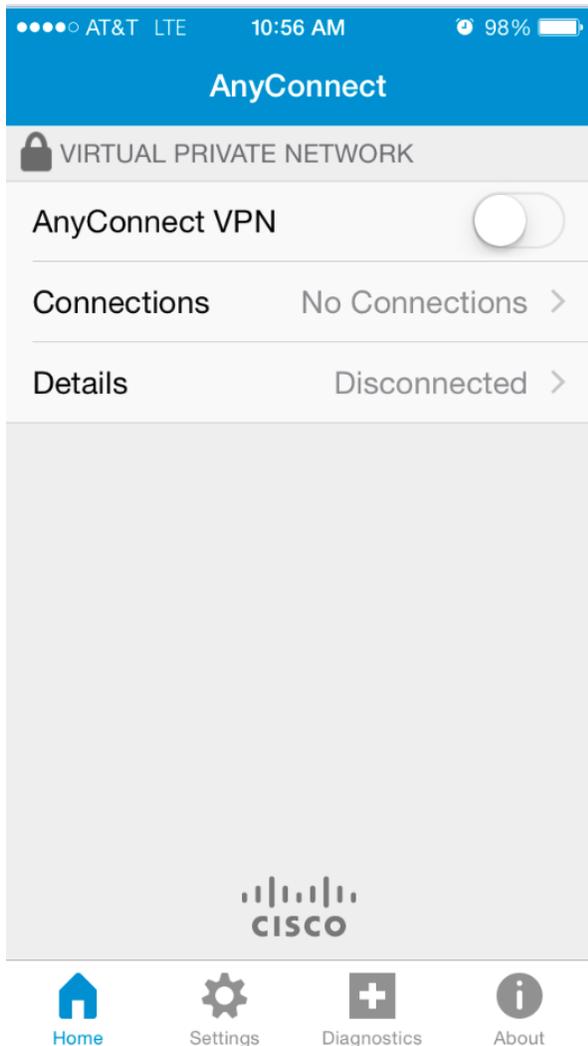

Instructions for Apple IOS

Installing Cisco AnyConnect VPN Client on Apple IOS

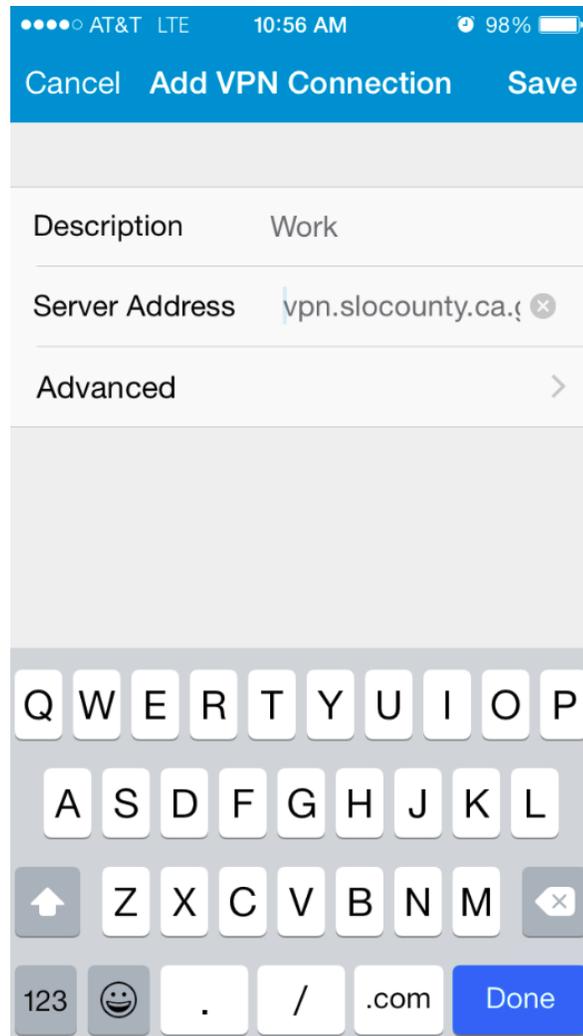

Open the App Store and search for Cisco Anyconnect, Press Get

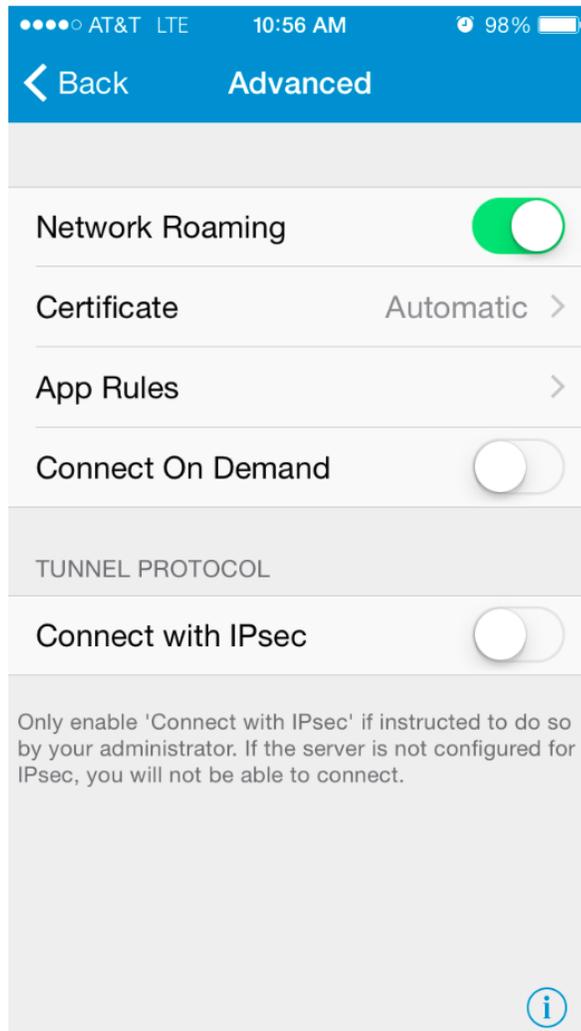

Enter your AppStore Account password if prompted to start the Download, Press OPEN.

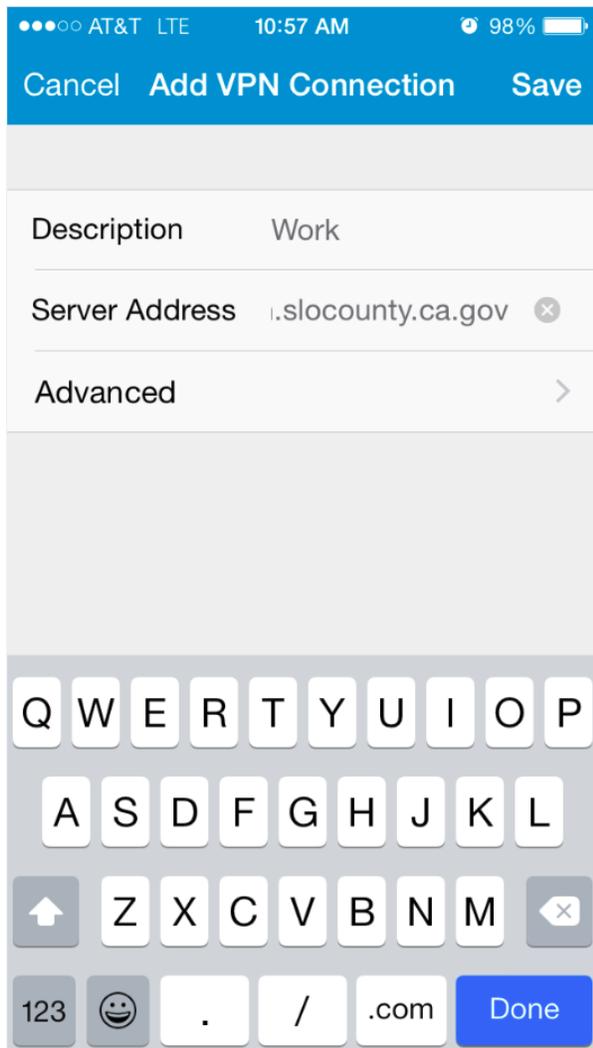

Once the Cisco AnyConnect client is open, you should see the left screen above. **Press Connections** to create your VPN Connection. **Press Add VPN Connection...**

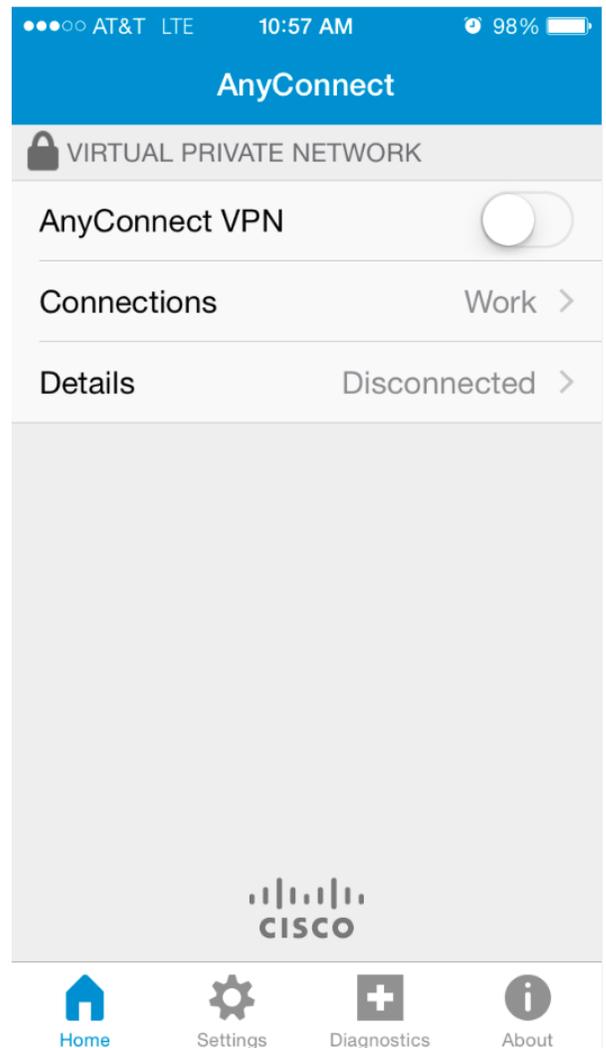

Add a Description and type **vpn.slocounty.ca.gov** into the **Server Address** field, then **press Advanced**.

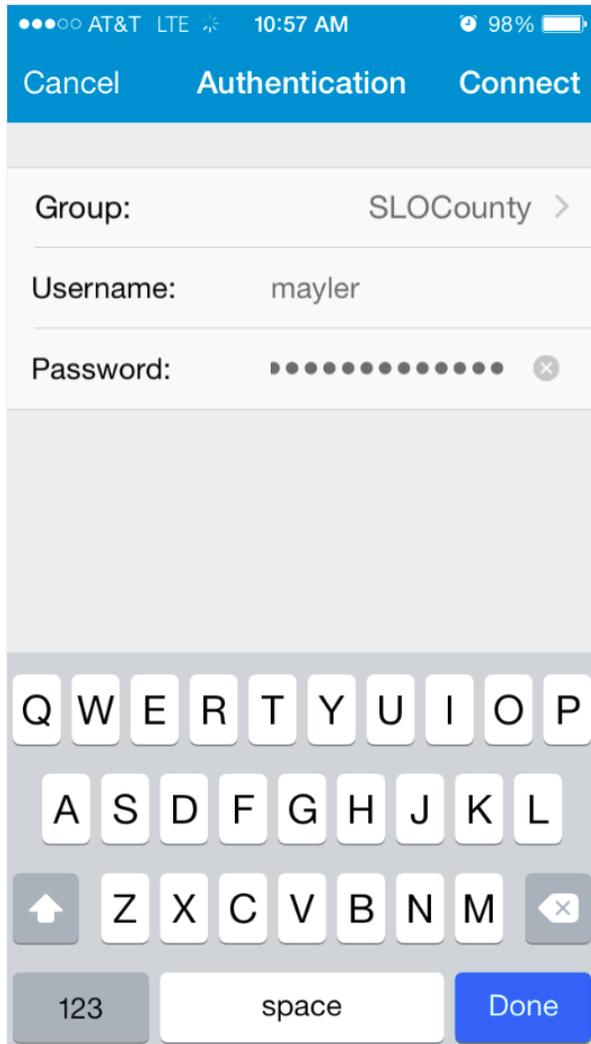

Settings on **Advanced** should remain at their defaults as displayed above. **Certificate** should remain as **Automatic** and **Connect on Demand** and **Connect with IPsec** should remain disabled. Now press **Back**.

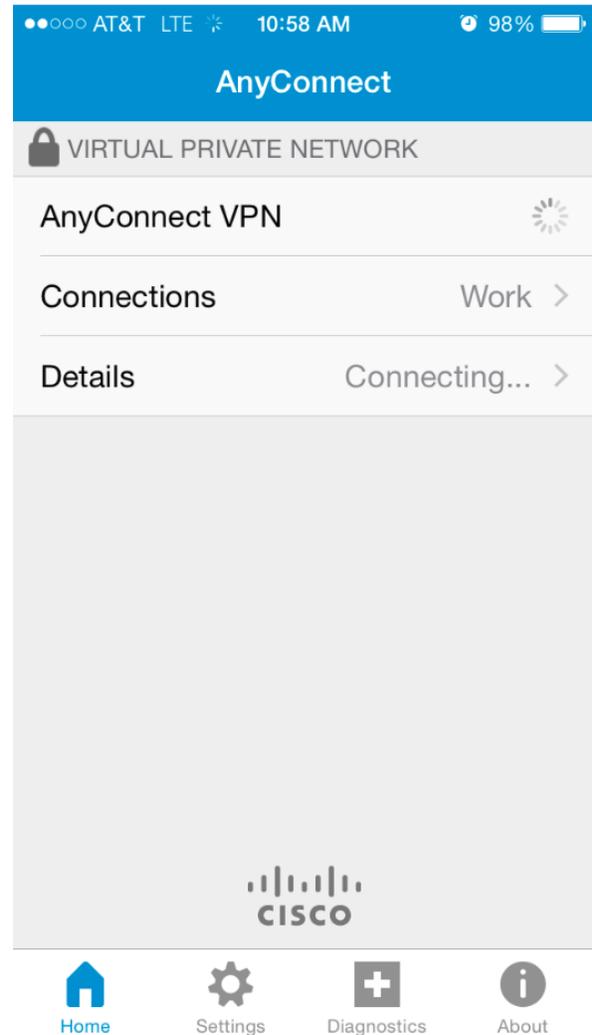

Press Save.

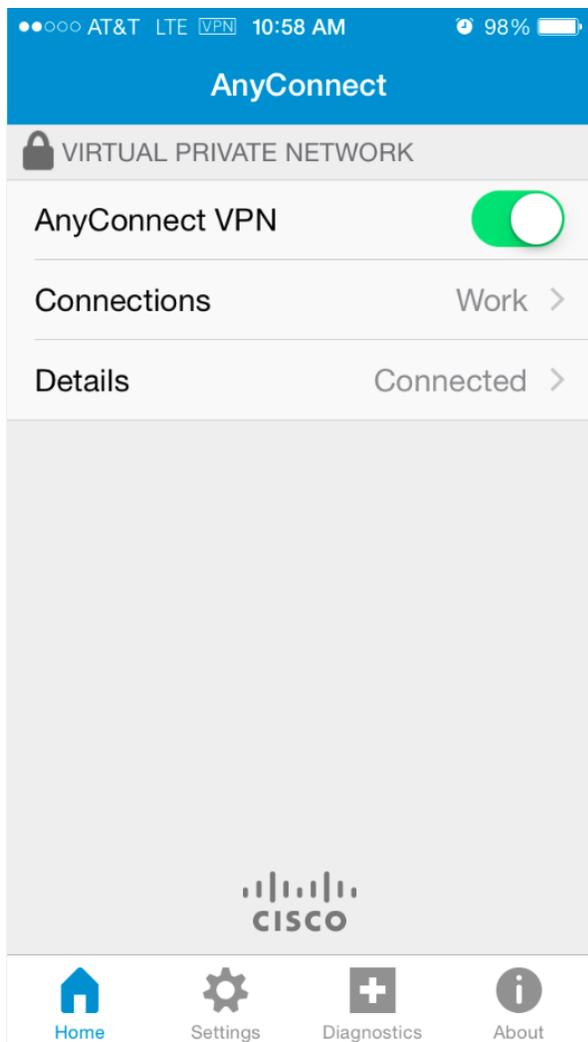

Press the AnyConnect VPN slider to connect.

Insert your Username and Password, Press Done

You should see this screen.

If you've followed all instructions and typed the correct username and password, you'll see this screen. You are now connected to the County Network. Now you can access resources as you do from the office.

Press the AnyConnect VPN slider again to disconnect.
