Appendix 9: Funding Sources and Policy Considerations

Appendix 10: Individual Project Information Sheets

 I. Infrastructure Project Sheets

 II. Facilities Project Sheets

Section 1: Executive Summary

The Five Year Capital Improvement Plan (CIP) is a multi-year planning tool designed to identify infrastructure and facilities improvements, with estimated costs over \$100,000, including major maintenance projects, during the period of FY 2020-21 through FY 2024-25. **This document is not a budget document as it does not allocate or formally commit funding to the identified projects.** Funding is allocated through the annual budget process or by separate action by the Board of Supervisors (Board). The CIP is a means to identify, schedule and track capital projects and provide the Board and staff with the needed information to determine priorities and assign limited resources to those priorities.

The CIP is the result of a collaborative effort by the County Administrative Office, and the Departments of Public Works, Parks and Recreation, Airports, Library and Planning and Building. The project selection process uses criteria to help prioritize proposed projects and provide greater coordination between the development of infrastructure and facilities projects, while incorporating overall land use plans and goals.

The Five Year CIP identifies individual projects, expected total capital costs and funding sources planned for consideration over the next five years. The CIP is categorized as follows:

- I. County Infrastructure including Utilities, Flood Control, Roadways and Bridges.
- II. County Facilities including, Parks, and Airports.

Adoption of the CIP is a requirement under the Government Code (65401 and 65403) which seeks to align the CIP with the established County planning documents. CIP development also provides outreach opportunity to align work with the various Community Service Districts (CSD) and advisory councils on a mid-range development plan. The previous Five-Year CIP was adopted by the Board on February 18, 2019.

CIP highlights include:

- 154 total projects with an estimated cost of \$608 million, including previous allocations and future years.
 - Approximately \$547 million, or 90%, of the proposed \$608 million expenditures will be funded using sources other than the General Fund. Funding sources include Public Facility Fees, grant funds, funding from special revenue budgets such as Roads, Parks, and Libraries funds, State funds for correctional facilities and reserves designated for specific projects. Large, multi-year projects will typically be funded through a combination of reserves and financing, as recommended by the Auditor's office. A full list of funding sources is outlined in Appendix 9.

- 46 infrastructure projects with a total estimated cost of \$223 million, are recommended for programming in this Five-Year CIP.

The following are some of significant infrastructure projects highlighted in the five-year CIP.

- \$50 million - Pavement Rehabilitation Projects (FY 2020-21 to FY 2024-25)
 - \$9 million - Arroyo Grande Creek Waterway Improvements
 - \$3.2 million - Tefft Street Interchange Operational Improvements
 - \$ 1.4 million - Los Berros Road Widening
- 108 facilities projects with a total estimated cost of \$385 million, of which approximately \$53 million has been funded in previous fiscal year budgets. The five-year timeframe forecasts an estimated \$325 million for new and multi-year projects. For 2020-21, \$53 million is estimated with \$3.6 million proposed for various Facility Condition Assessment repair projects.

The following are some of the major multi-year facility projects highlighted in the five-year CIP.

- \$20.3 million – New Animal Services Facility
- \$18 million - Co-Located Emergency Dispatch Center
- \$4.6 million - El Chorro Park Master Plan Implementation
- \$22.3 million – New Probation Office Building

The continued development of capital infrastructure and facilities will be essential to the growth of the County. Like most other jurisdictions, the County faces challenges where demand for infrastructure and facilities exceeds resources available for their construction and operation. This challenge is only partially met by this plan. However, the capital and major maintenance improvements identified provide a clear and achievable investment which will maintain, improve, and expand the infrastructure and facilities serving the County.

In addition to the Five Year CIP, the County Administrative Office has been leading development of a Regional Infrastructure and Housing Strategic Action Plan, in collaboration with County Departments of Public Works and Planning and Building, the seven cities, San Luis Obispo Council of Governments, and key stakeholders. This regional plan looks at the needs associated with the State's projected growth of the entire region, including unincorporated communities and the seven cities. The regional plan is intended to integrate efforts across the eight local land use planning agencies during developing of the eight State-required 2020-2028 Housing Elements (Government Code § 65580 et. seq.). The integrated efforts will provide a better understanding of where future growth is expected to occur countywide. Based on that land use planning, the participating agencies will collaboratively identify regional infrastructure priorities associated with resiliency and the planning for future growth. The regional plan is still under development and therefore is not reflected in this FY 2020-21 Five Year CIP's priorities. As the regional plan is finalized in FY 2020-21, the County Departments will work together to identify how its identified priorities relate to the Five Year CIP.

Section 2: CIP Development Process

The plan is dynamic in nature and changes year to year as priorities, needs and funding change. The CIP is a guide for the consideration, selection and development of; roads, sewers, water systems, bike lanes, parks, airports, offices and other types of facilities necessary to provide communities with services. The projects include significant maintenance and replacement of existing infrastructure and facilities and construction of new facilities and infrastructure.

The following diagram shows the inputs into the infrastructure and facilities planning and development process:

The County Administrative Office provides budgeting direction and oversight for capital improvements. The Public Works Department is responsible for the development and coordination of capital and major maintenance project planning and prioritization processes for County infrastructure and facilities. Infrastructure includes the various special districts it administers, such as roads, bridges, water and wastewater systems, and drainage structures in the unincorporated areas of the county. Facilities include office buildings, libraries, fire stations, jails, public safety radio communications system, parks, airports, and health facilities. The Parks and Recreation Department develops projects for parks and trails with the concurrence of the Parks and Recreation Commission. The Airport Department maintains and manages projects for airport facility upgrades and improvements in concert with Federal Aviation Administration

funding programs. The County's Resource Management System (RMS), as periodically reviewed by the Board of Supervisors, will also be a key element in planning the CIP. Connected to the RMS is the review of Groundwater resources in the County. Given the recently enacted State legislation on groundwater management, these will come to the forefront of potential needs for capital projects.

The last Five-Year CIP was presented to the Board of Supervisors on February 18, 2019. The Board was presented with a consolidated, prioritized facilities and infrastructure project plan in alignment with Board approved plans and policies guiding budgeting, land use and strategic goals.

Ultimately, the CIP is focused on achieving the following goals:

- Develop a consistent annual process to coordinate the planning and development of infrastructure and facilities projects.
- Enhance coordination and communication among the County departments and other entities involved in the development of capital projects.
- Increase the alignment between infrastructure and facilities projects and adopted land use plans and policies.
- Increase opportunities to identify and align funding sources necessary for the development of improvements.
- Increase awareness of planned capital projects to the public and community partners.

I. Coordination of the CIP

The CIP is developed through outreach with various internal and external stakeholders. The facility priority list is derived from projects submitted by the County departments which are ranked and reviewed with the Capital Improvement Executive Steering Committee (CI-ESC) for prioritization, as outlined in Appendix 8. Many of these department submittals reflect priorities from external stakeholders such as Friends of the Library groups or parks and recreation advocacy groups. Infrastructure projects are coordinated through both technical and community advisory councils to develop a consensus on project need and in developing viable projects to advance. The development of an overall CIP provides consideration of land use goals and policies to identify and recommend capital projects.

A. Coordination with Community Services Districts (CSDs)

The intent is to provide a broader picture of planned infrastructure improvements as it relates to planned improvements by these districts which may have an impact on growth in the unincorporated communities. The projects in this plan are those which are directly under the authority of the Board of Supervisors and special districts in which the Board of Supervisors is the governing body. The County is not responsible for all capital projects in the unincorporated area as some capital projects are within the jurisdiction of CSDs. Notable Districts and their functions include:

<u>District</u>	<u>Services Provided</u>
Avila Beach CSD	Water, Wastewater, Fire Dept., Streetlights
Cambria CSD	Water, Wastewater, Fire Dept., Streetlights, Parks
Heritage Ranch CSD	Water, Wastewater
Los Osos CSD	Water, Fire Dept., Drainage
Nipomo CSD	Water, Wastewater
Oceano CSD	Water, Wastewater, Fire Dept., Streetlights
Port San Luis Harbor District	Water, Wastewater, Parks
San Miguel CSD	Water, Wastewater, Fire Dept., Streetlights
San Simeon CSD	Water, Wastewater, Roads, Streetlights
Templeton CSD	Water, Wastewater, Fire Dept, Parks, Drainage

County staff coordinates work on specific projects with a CSD and has provided opportunities for work by the CSD to be completed in County construction contracts when the CSD enters into a joint funding agreement. Additional partnering will occur in the future as projects are developed.

The Local Agency Formation Commission (LAFCO) Sphere of Influence studies do include listings of future Infrastructure needs for CSDs. The Planning and Building Department and Public Works staff have also communicated with CSDs and conducted a formal survey of the CSD for planned infrastructure work as well as work programs the County and CSD may collaborate in the future. There is an increase in annual submittals from the CSDs, however, County staff will continue to coordinate with CSDs through outreach with the General Managers at their regular meetings. Over time, individual CSD’s CIPs will be included in this document to provide a centralized resource of planning and coordination for infrastructure development.

B. Coordination with Industry Stakeholders

Over the past year, County staff has met with the San Luis Obispo Economic Vitality Corporation’s Building Design and Construction (BDC) business cluster. Discussions have focused on reviewing the process of developing a CIP as well as reviewing planning documents and needs assessments which identify specific improvements. The BDC has continued to provide review of the annual CIP in order to look for opportunities to advance pressing infrastructure gaps which will facilitate in-fill development or in accommodating areas for residential and commercial development. Current initiatives working toward regional housing assessment needs will further these goals which will be folded into future CIP. The BDC will also look to promote cooperative funding mechanisms to advance critical projects, potentially through private-public partnerships.

C. Coordination with Other Agencies:

Public Works will also continue to coordinate infrastructure projects with the staffs of both the San Luis Obispo Council of Governments and Caltrans as well as monitoring projects in cities which may have an impact on the surrounding unincorporated area.

II. Project Selection for CIP

A. Infrastructure Projects:

Infrastructure projects are advanced under several plans and programs established under the Public Works, Airports, and Parks & Recreation Departments. For example, transportation infrastructure priorities and projects can be found in various documents such as:

- Pavement Management Plan
- Bridge Management Plan
- County Bikeways Plan
- Various Community Circulation Studies/Road Improvement Fee programs

Transportation needs assessments are updated continuously. Funding is then sought through Road Fund maintenance accounts, Federal bridge replacement and safety grant programs, and through the regional transportation agency; San Luis Obispo Council of Governments (SLOCOG).

Utility and Flood Control projects are developed under initial System Master Plans which contain Capital Improvement Recommendations. Projects are developed with community input and reviewed by Community Advisory Councils prior to establishing these projects in annual budgets and the CIP. Regional water resource projects are defined under the Integrated Water Resource Management (IWRM) plan which receives grant allocations to the central coast. A Regional Stakeholders group defines priorities for funding the highest ranked projects under this program. Local system upgrades are pursued based on available capital reserves for each system.

B. Facility Projects:

Public Works conducts an annual facility project submittal process from County departments. These projects are evaluated based on criteria listed in Appendix 8. Requests are also considered with other facility planning initiatives. Department requests are placed on hold if they will be addressed through the Facility Conditions Assessment (FCA), Facilities ADA transition plan update, or are in conflict with master planning efforts. Staff capacity is also analyzed as part of determining the recommended project list. In general, the lower cost projects are retained for County staff to develop and pursue while larger projects are outsourced to private firms. In both cases, County staff must manage these resources and plan the work over several phases, and sometimes years, for implementation. The projects are then advanced based on available funding.

In addition to the annual department project request process, other facility initiatives and programs, as well as external requirements, drives programming of the Facility CIP. Appendix 5, Facilities Planning Strategy, provides explanation of these initiatives.

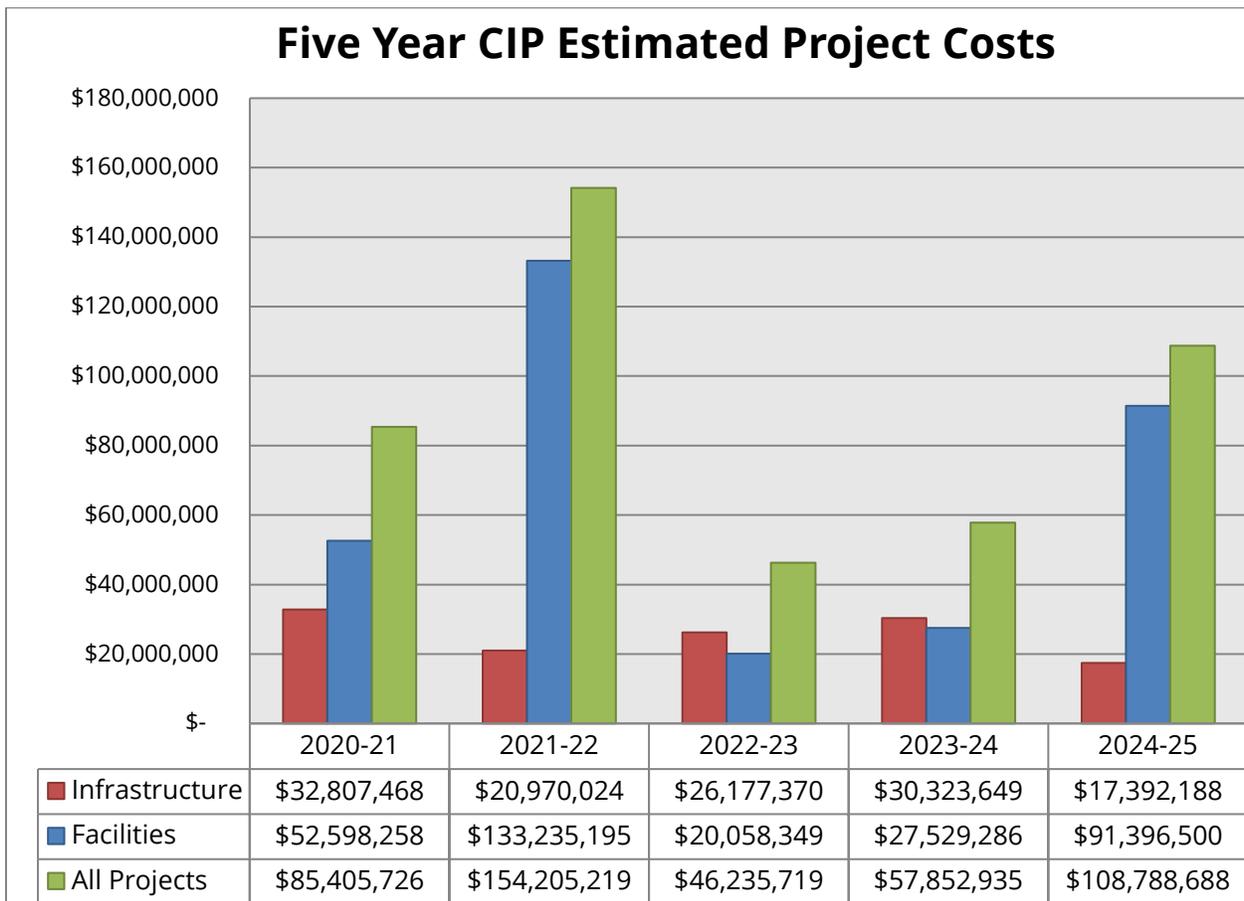

- Facility Conceptual Plans
- Facility Condition Assessments (FCA)
- Americans with Disability Act (ADA) Facilities Transition Plan update
- Seismic Evaluations and Voluntary Strengthening Retrofits
- Building Security Assessments
- Energy and Water Conservation Opportunities
- Storm Water Management Plan Implementation

Section 3: Recommended Projects for the Five-Year CIP

I. Consolidated CIP Expenditure Plan

Chart 1 shows estimated costs by year, including active and proposed projects. Funding sources are less certain in the later years of the plan and fewer projects and funding are shown. The large estimated facility costs in 2024-25 include a proposed new General Government building in downtown San Luis Obispo. As annual updates occur, funding sources will be identified, and new projects and costs will likely be added to the plan.

Chart 1

FY 2020-21 Highlights

- 38 infrastructure projects are proposed for FY 2020-21 with a total expenditure of \$32.8 million.
- 43 facilities projects are proposed for funding in FY 2020-21 with an estimated cost of \$52.6 million.

The functional areas for infrastructure and facilities are described in greater detail in Appendix 4. Funding sources typically used to finance the design and construction of projects are described in Appendix 9.

Appendices 1 and 2 include brief narratives and a series of charts which provide a graphical summary of the proposed allocation of funding by functional areas, numbers of projects by functional areas. Appendix 1 describes infrastructure projects. Appendix 2 describes facilities projects. Appendix 3 provides a list of the projects by Community.

II. Infrastructure Projects

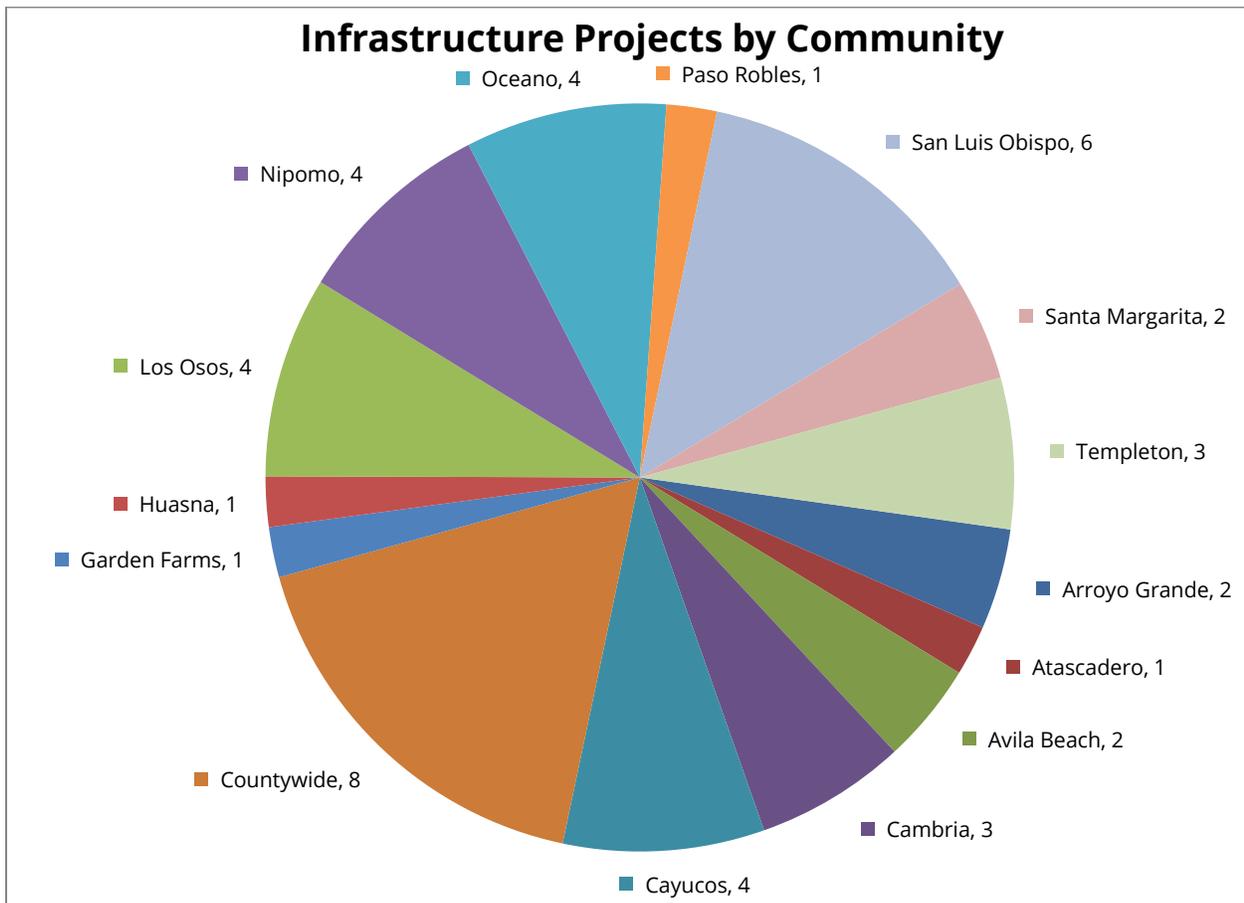

This section provides information about the infrastructure projects to be considered for funding and construction over the next five years.

Infrastructure projects are grouped into eight functional areas:

- Flood Control
- Road Capacity (Road Improvement Fees)
- Road Preservation
- Road Safety
- Transportation Betterment
- Transportation Structures
- Wastewater Systems
- Water Systems

Appendix 4 provides a description of each functional area. The distribution of the Infrastructure projects by community is shown in Chart 2.

Chart 2

III. Facilities Projects

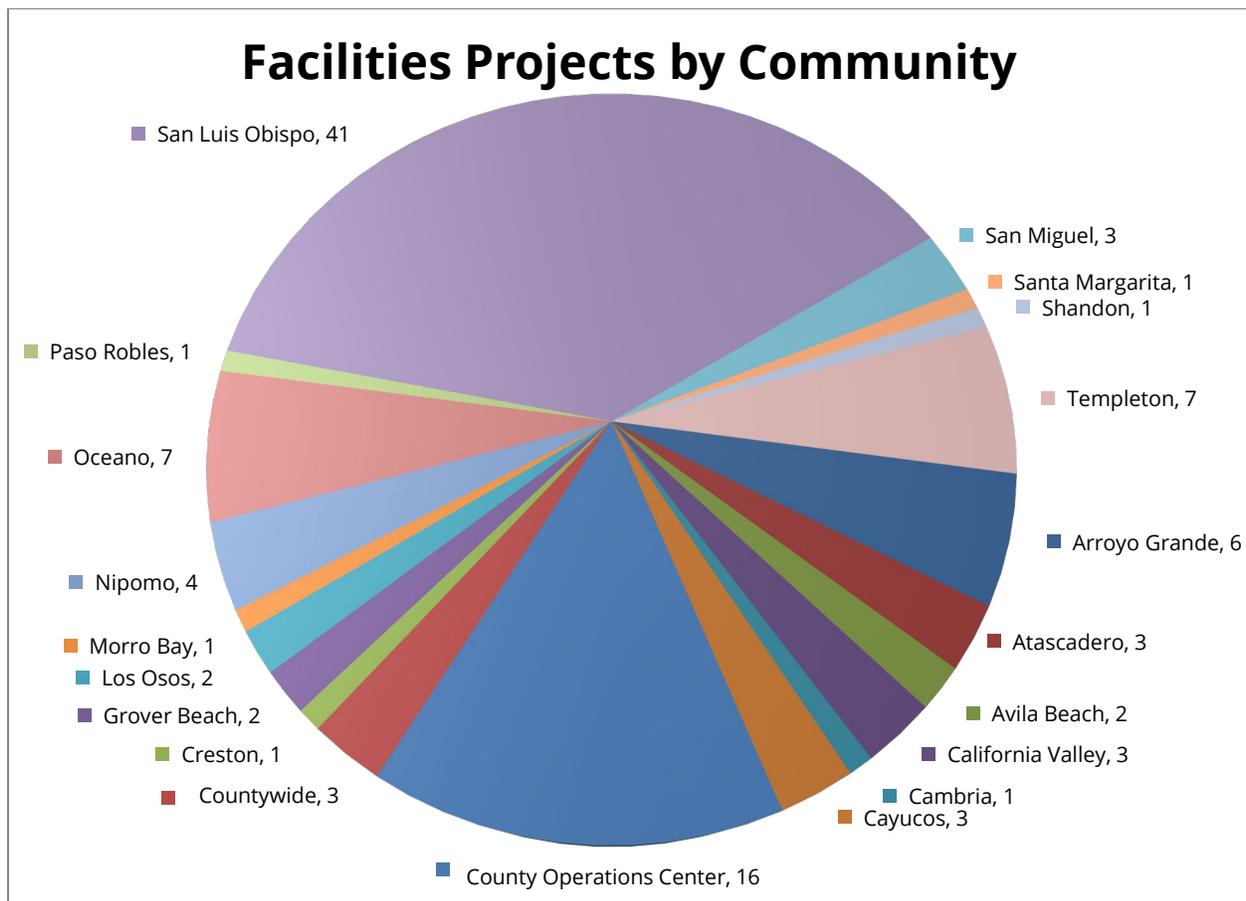

This section provides information about the facilities projects to be considered for funding and construction over the next five years.

Facilities projects are grouped into functional areas which are consistent with those identified in the capital and maintenance project fund centers of the County budget. The eight functional areas are:

- Airports
- Community Services
- General Government
- Golf Courses
- Health and Social Services
- Library
- Parks
- Public Safety

Appendix 4 provides description of each functional area. The distribution of the facilities projects among the communities is shown in Chart 3 below. The majority of the projects are in the City of San Luis Obispo and the County Operations Center (COC), since those communities house most of the General Government and Public Safety functions for the County.

Chart 3

Section 4: Operational and Maintenance Costs for Infrastructure and Facilities

Operational and Maintenance Costs

There are other cost components which are not yet fully identified in this plan. As new roads, water and wastewater systems, and new and expanded facilities are constructed, the operational costs of new staff, utilities, and maintenance are likely to increase. Conversely, where improvements are for replacement or major maintenance of existing facilities, maintenance and utility cost may decrease through lowered maintenance needs and increased energy efficiency.

Where infrastructure is supported by service charges, such as water system improvements, increased operational costs are factored into the equation. When new facilities are proposed, consideration is given to the ongoing operational costs to the County.

The Plan will utilize International Facility Management Associations (IFMA) benchmarks for maintenance and custodial costs. The intent is to demonstrate how many more employees (and their subsequent cost) will be needed with the construction of a new facility. IFMA benchmarks are one maintenance mechanic per 50,000 sq. ft. and one custodian per 25,000 sq. ft.

Maintenance Funding and Cost

Existing facilities and infrastructure require regular ongoing maintenance. This includes the maintenance of County facilities as well as roadway, flood control, water, and wastewater infrastructure owned by the County.

The County of San Luis Obispo County has approximately 250 buildings ranging from office buildings to libraries, health clinics and jails. These facilities are spread throughout the County and vary in age from the late 1920's (such as the Public Health Clinic in Atascadero) to newer facilities recently constructed (such as the Creston Fire Station). Most of these buildings have equipment that requires scheduled maintenance.

Funding for maintenance is included in the County's annual budget. The annual expenditures for maintenance address the County's highest priority maintenance needs. However, as the miles of County roads and number and size of facilities increase, not all maintenance is capable of being addressed and some is deferred.

Infrastructure Deferred Maintenance

The County road system comprises over centerline 1300 miles and 187 bridges. Overall condition of the road system is rated on a 0 to 100 scale referred to as the Pavement Condition Index (PCI). The desired goal set by the board is to maintain the overall system at a PCI rating no less than 65 as this is a level which indicates that the key roadways of the system are in good repair and that preventative maintenance can be done with cost effective techniques on the remaining system. Once a PCI for the system falls into the mid-50's, repairs and maintenance require much more expensive techniques. The 2015 Pavement Management Plan with 2019 Addendum is available at

<https://www.slocounty.ca.gov/Departments/Public-Works/Forms-Documents/Transportation/2015-Pavement-Management-Report-with-2019-Addendum.aspx>. Currently, the overall system has an average rating of 61 PCI. In general, roads within the urban areas (URL's and VRL's) average a 70 PCI or higher. It is the rural low volume roads, primarily in the northerly part of the County, which average in the 50 PCI and brings the overall PCI into the low 60's. The Department of Public Works continues to identify and determine strategies to address these conditions by maintaining the good roads in good condition and repairing the bad roads. The overall Road Fund available, for both routine and preventative road maintenance, has been averaging about \$20 million annually. In order to prevent deferred maintenance values from increasing, a \$10 million annual pavement management program is required.

The County maintains a solid bridge replacement and rehabilitation program under this CIP which is funded in large part through the Federal Bridge Program. The current average age of these bridges is 52 years; consistent with County adopted targets. Replacement of our 31 rapidly aging timber structure bridges will remain the focus of this program for the foreseeable future. Currently, the County is advancing a dozen active bridge projects, including 5 timber bridges, with a value over \$50 million. The overall bridge program is described in detail under the 2014 County Bridge Maintenance Program located at <https://www.slocounty.ca.gov/Departments/Public-Works/Forms-Documents/Transportation/Bridge-Program-Report.aspx>.

Deferred maintenance on flood control facilities may result in impaired capacity in channels and increase in the frequency of flooding. The primary County flood control facility is the Arroyo Grande Creek Channel within Flood Control Zone 1/1A. The channel has seen a significant reduction in storm carrying capacity over the past 20 years due to limited district revenues for maintenance and an increase in environmental regulatory constraints to perform the needed maintenance. Over this time, deferred maintenance costs have accumulated to about \$9.2 million. The Board has adopted a Waterway Management Plan for Arroyo Grande Creek which is the basis for the project moving forward for implementation. Phase I improvements have been completed in 2019. Phase II improvements are expected to be done in 2020.

Other flood control facilities are included under Flood Control Zone 16 which is funded through local assessment of parcels. The zone will require voter approved increases in assessments to keep pace with future maintenance costs. The Department also has a listing of drainage needs and costs which have been developed under individual community drainage studies developed under the Flood Control District. Collectively, the studies show a need for over \$89 million in drainage improvements in the unincorporated communities. Details of the studies are available at <https://www.slocounty.ca.gov/Departments/Public-Works/Services/Drainage-Studies.aspx>. Of note, the Oceano drainage improvements at Route 1 and 13th Street are currently wrapping up construction in early 2020.

The County operates approximately 75 miles of water transmission lines to supply water to various agencies. While these systems are monitored and provided with maintenance funding via participating agency contracts, the smaller community systems operated by the County generally have insufficient funds to cover all upgrades and maintenance costs. These systems included County Service Areas 10A

(Cayucos), 16 (Shandon), and 23 (Santa Margarita). The local systems are composed of approximately 15 miles of pipelines and 6 storage tanks. Deferred maintenance in utility systems can result in the deterioration of key components such as tanks and pipelines. Pipe leakage results in loss of water from the system which relates to both water availability and costs. Costs for maintenance are included in system rates and charges, however, the costs for system replacement of the key components typically exceed the capacity of the ratepayers in these smaller systems. The Department of Public Works has sought grants and loans under federal programs, such as the US Department of Agriculture, to complete these large-scale improvements. **Rate increases in all three CSA’s have been completed or are pending.**

The County currently maintains two wastewater systems under County Service Areas 7A (Oak Shores) and 18 (Country Club Area). Leakage in wastewater creates increased volumes for processing which in turn increases operating expenses. This condition was evident in lake flows into the CSA 7A system in the early 2011 due to a lateral pipe leading into the main collector system. The Department of Public Works is in development of an Assessment Report on CSA 7A conditions as well as potential implementation options to address the maintenance and operations. The report will be reviewed by the Board of Supervisors to determine direction and alternative costs of options to pursue, in conjunction with a proposed rate increase. This rate increase in CSA 7A is the second attempt at approval, and the County will explore divestment of the wastewater system if sufficient funds cannot be raised.

Facility Deferred Maintenance

The Facility Condition Assessment (FCA) program provides a systematic approach to address existing deferred maintenance at County Facilities, as well as planning for repairs and/or asset replacements as they reach the end of useful life. The FCA approach allows proactive work toward identifying needs in advance of department improvement requests, and cost-effective capital improvements plan development, including capacity and service needs. The FCA is used to develop a preventative maintenance program which reduces the frequency of equipment failures or service operations which would negatively impact the building’s occupants or services.

The FCA program generates a Facility Condition Index (FCI), which is a ratio of the cost of the deficiencies to the replacement value of the building. The FCI is structured such that the lower the rating, the better relative condition of a facility. The National Association of College and University Business Officers, where the FCI metric was first developed, has developed the following FCI scale:

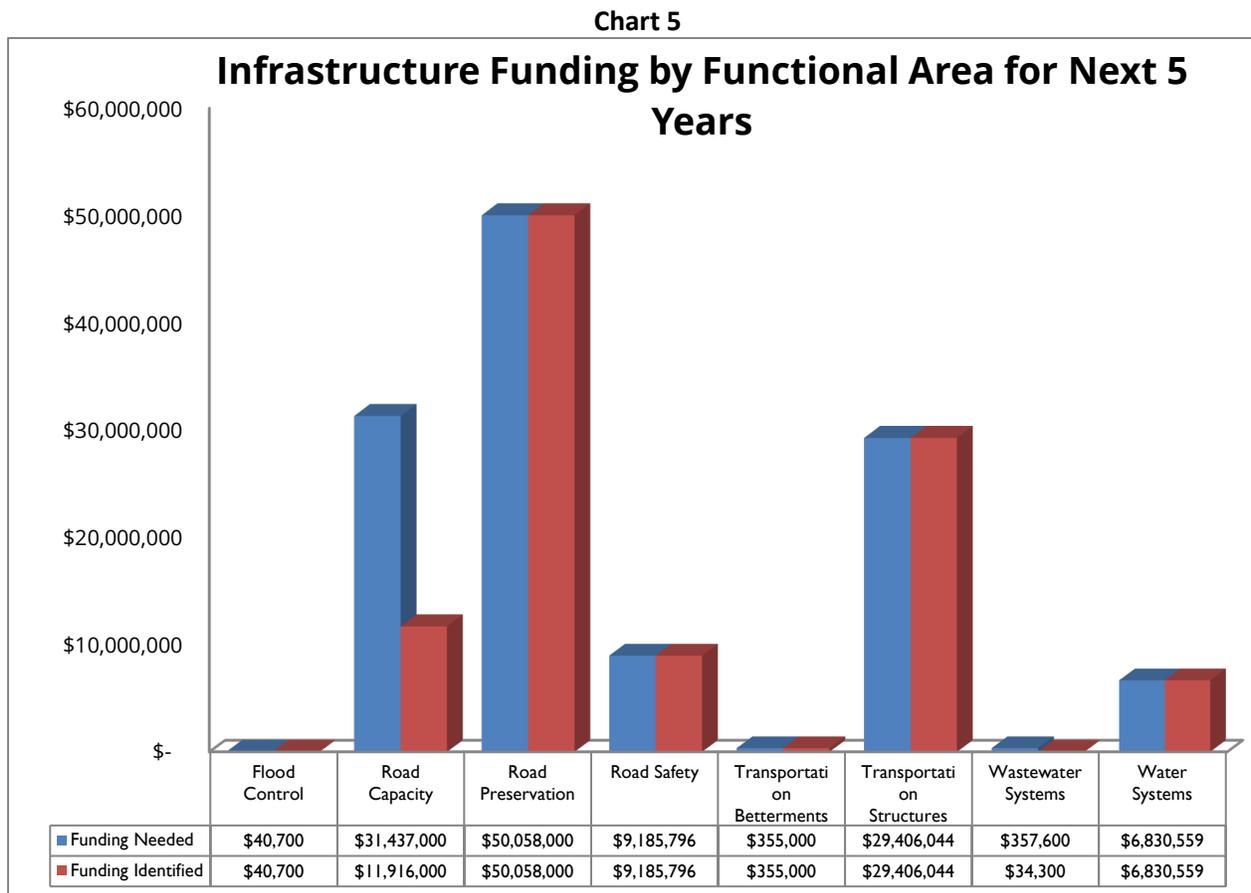

FCI	Facility Condition
0-5%	Good
6-10%	Fair
11-30%	Poor
>31%	Critical

The FCA process, currently being managed by Public Works staff, inventories County facilities into these categories. Work is then prioritized by facility condition, taking into consideration other information such as master planning documents. The County's target FCI for various facility types are outlined in Appendix 5, which also has a listing of the FCI of all assessed building facilities.

Appendix 1: Infrastructure Projects

Chart 5 – Infrastructure Project Funding by Functional Area

Chart 5 shows the proposed allocation of funding for infrastructure functional areas. The blue bar (darker shade in black and white) on the chart identifies the estimated cost of all projects in the functional area category. The red bar (lighter shade in black and white) identifies the amount of funding which is either currently available or potentially available through a verified source of funds. Funding identified for road capacity improvement, flood control and transportation betterments are well short of funding required. Some funding sources are dependent on the future allocation of funds from the State and Federal government.

The Five Year CIP has a total of 46 infrastructure projects. Four new infrastructure projects have been added to the updated Plan. Details of the projects are shown on the individual project summary sheets, which can be found in Appendix 10.

The CIP identifies projects intended to be funded and initiated within the five year time frame. The annual review of the CIP identifies projects that have been completed and projects which may be discontinued as higher priorities and changes to planned funding sources are identified.

Chart 6 – Infrastructure Projects by Functional Area

Chart 6 shows the number of infrastructure projects by functional area. Transportation project funding has had a significant boost under Senate Bill 1 (SB1) funding established in April of 2017. The existing gas tax was expanded by 11 cents per gallon and the existing gas tax has been indexed to address inflation over time. With that, at least \$ 6.5 million a year would be committed to road maintenance and should fully fund the pavement management into the future. Under SB1, the County's General Fund is obligated to contribute \$6.2 million annually as a Maintenance of Effort to receive the full SB1 funding. Expansion of road capacities are funded under the various Road improvement Fee programs adopted by the Board as well as requirements of specific subdivision improvements.

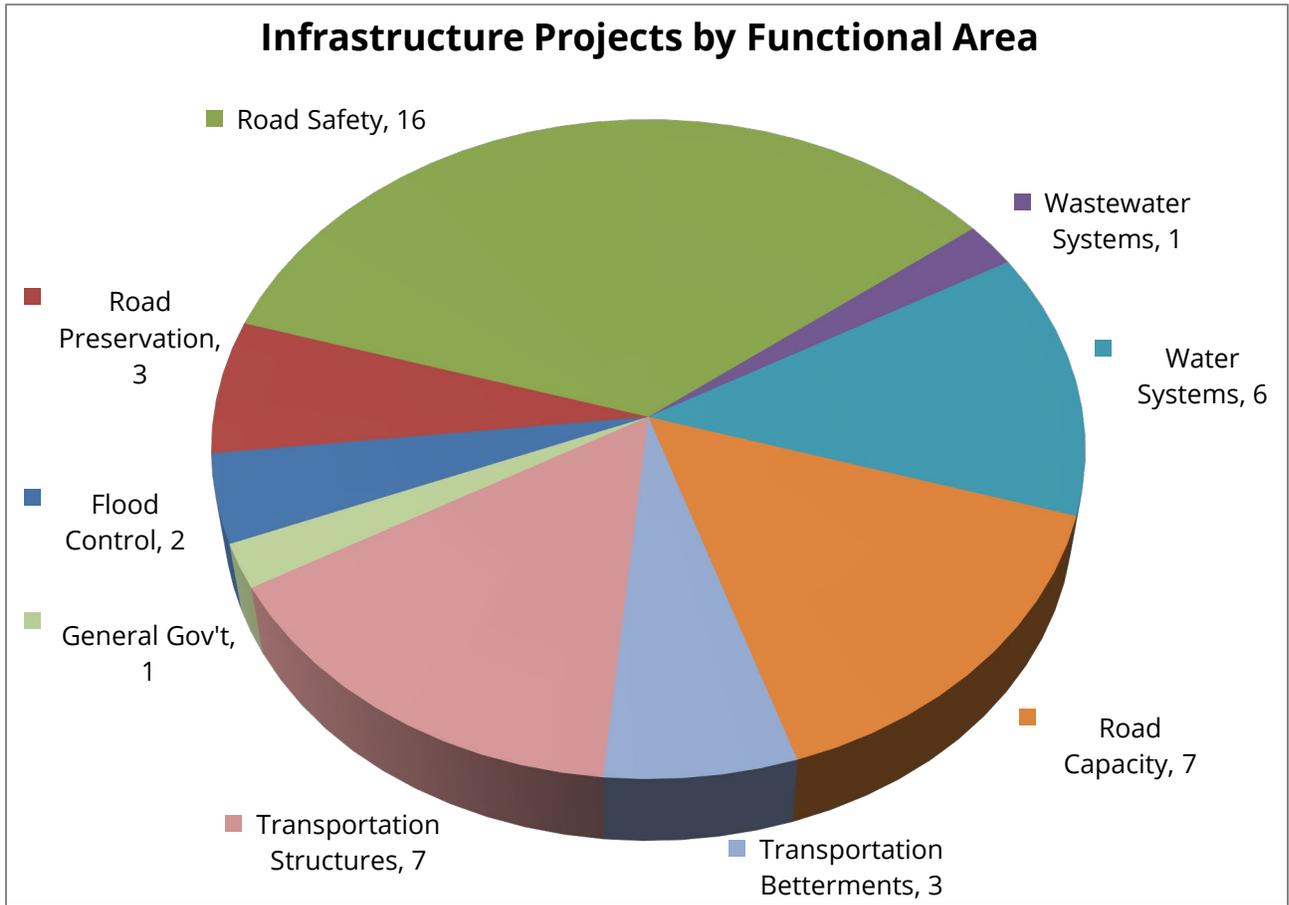

The County also makes use of several Federal Highway Bridge Program and Highway Safety program grants which would be expected to bring in over \$30 million to the County in the next five years. Transportation enhancements are funded under state grants under the Active transportation program (ATP) of which the County has seen limited success.

CIP efforts in the County and Flood Control and Water Conservation District's water, wastewater, and flood control systems are funded primarily through rates and charges levied on the beneficiaries of the particular project. Wholesale systems (Nacimiento, Salinas, Lopez, State Water and CSA12) are funded through contracts with the entities that receive water from those systems. Smaller CIP efforts can often be funded through system reserves, while larger projects are typically funded through a combination of reserves, grants, and loans.

Funding CIP efforts that may result from the implementation of Groundwater Sustainability Plans (GSPs) will be the responsibility of the respective Groundwater Sustainability Agency (GSA), as those agencies are separate government entities from the County. The role of the County and/or Flood Control and Water Conservation District in partnering with a GSA to fund CIP projects is not yet known, primarily because the respective GSPs will not be complete and approved by the State until 2020 at the earliest.

Long term region wide water supply planning is advanced by the Flood Control and Water Conservation District. Planning efforts are funded by the District's *ad valorem* tax. Per the adopted policies of the District, CIP project funding is the responsibility of the beneficiaries of the project and is typically accomplished through the establishment of a separate Flood Control Zone that is accompanied by either, or a combination of, contracts, assessments, rates and charges.

Chart 6

Appendix 2: Facilities Projects

Chart 7 – Funding By Functional Area

Chart 7 shows the estimated cost for facilities projects by functional areas. The blue bar (lighter shade in black and white) on the chart identifies the estimated cost of all projects in the functional area category. The red bar (darker shade in black and white) identifies the amount of funding which is either currently available or potentially available through a verified source of funds. Sources of funding for these projects may include General Fund, reserves and designations and grant funds where available. Expenditures will be refined as project scopes are developed through the design and bidding phases, and specific sources of funding will be identified through the annual budget process.

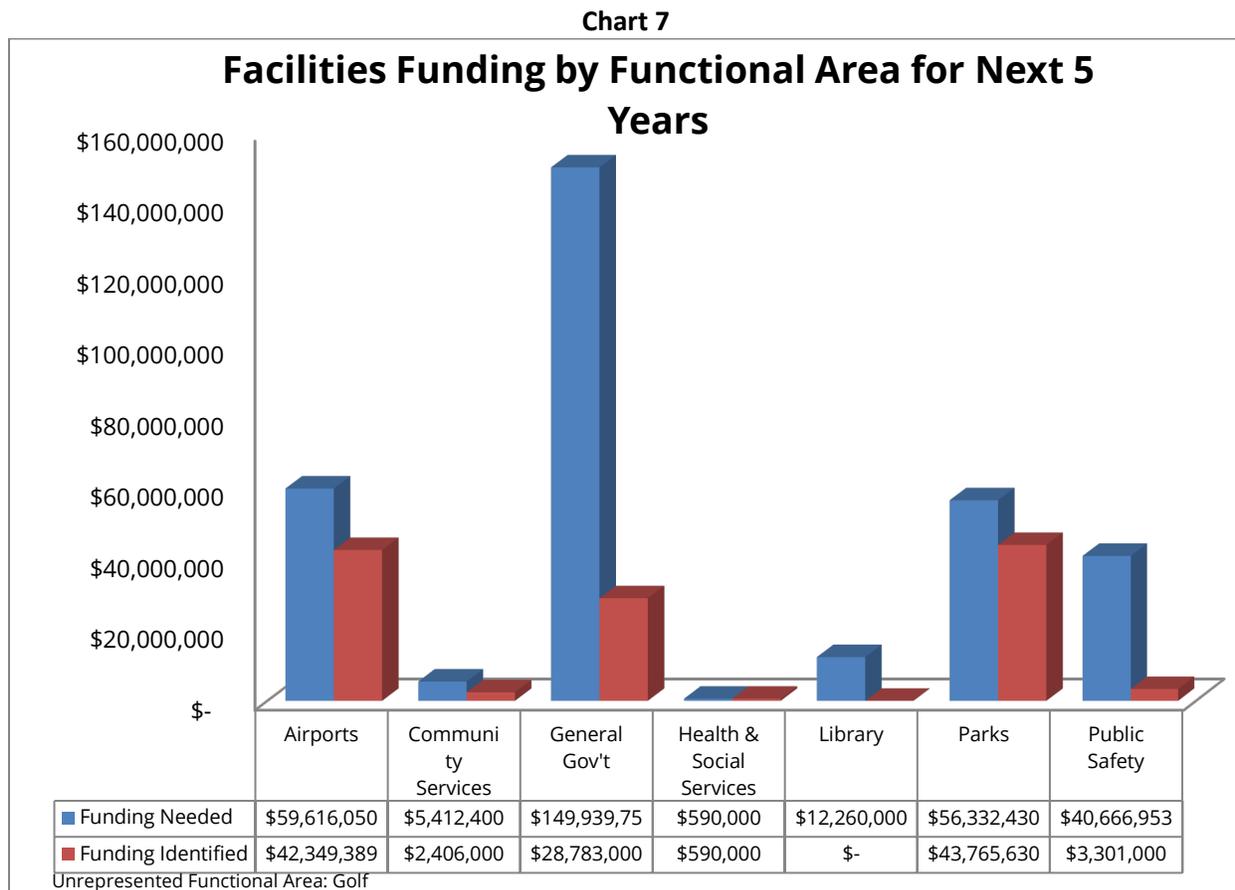

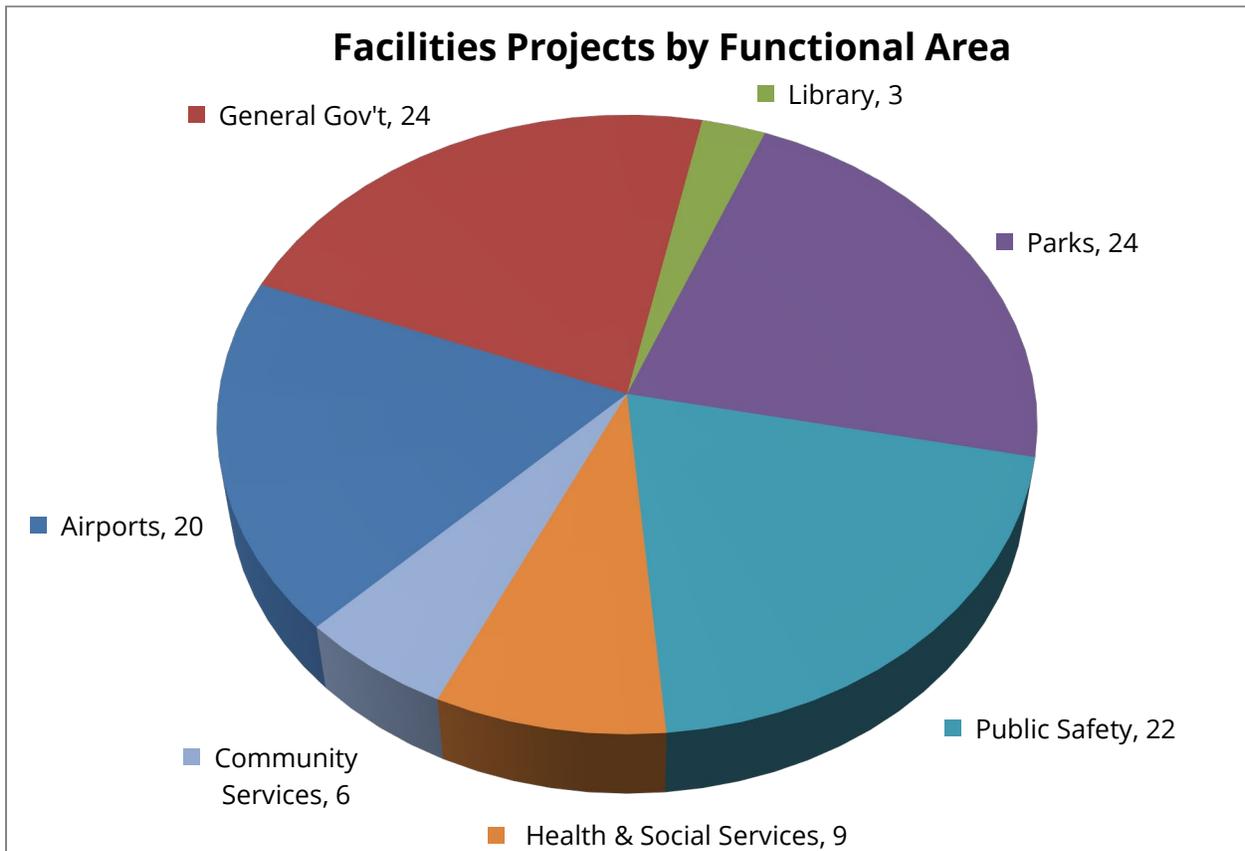

Chart 8 – Facilities Projects by Functional Area

Chart 8 shows the number of facilities projects by Functional Area as listed in Appendix 3.

The Consolidated Summary of Projects in Appendix 3 provides a complete listing of the projects, with their functional area and their estimated costs. Appendix 10 contains individual project information sheets which provide project descriptions, estimated costs and proposed funding.

Chart 8

Appendix 3: Consolidated Summary of Projects by Community

The Capital Improvement Plan Five Year Summary table lists all infrastructure and facility projects in the CIP.

5 YEAR CAPITAL IMPROVEMENT PLAN SUMMARY

Community	Functional Area	Requesting Department	Fund Ctr	Project Title	Project No.	Anticipated Project Finish	Estimated Project Cost	Prior Years	2020-21	2021-22	2022-23	2023-24	2024-25	Future Years	Total Estimate

Appendix 4: Functional Area Descriptions

Project Functional Areas

The capital projects in this report have been grouped into functional area categories. The functional areas for infrastructure facilities have been developed by Public Works. The facility functional areas generally coincide with the use of the facility. For example, library projects are in the Library functional area and the Women's Jail is in the Public Safety functional area.

Infrastructure Project Functional Areas

Public Works infrastructure is broken down into the following functional areas:

- Flood Control – Local drainage needs have been defined through a six community drainage study and the County works toward implementation of the associated capital improvements list. Arroyo Grande Channel is the major County Flood Control facility under this functional area.
- Transportation:
 - *Road Capacity (Road Improvement Fees)* – Projects which improve transportation system capacity and mitigate new development impacts. These are identified in various circulation studies and fee programs adopted by the Board. Board adopted policy for action is to maintain a Level of Service D or better.
 - *Road Preservation* – This category involves maintenance of the existing roads system, primarily road surface condition, as well as adhering to State and Federal Mandates such as National Pollution Discharge Elimination System (NPDES) and Americans with Disability Act (ADA) requirements. The target of road system preservation is established by the Board which is currently to maintain an overall system pavement condition of not less than 65.
 - *Road Safety* – Projects in this category improve existing sites known to have safety needs or improve the road conditions to reduce frequency and extent of collisions. The standard is to maintain collision rates at or below State Highway collision rates.
 - *Transportation Betterment* – These projects are discretionary enhancements to non-motorized transportation such as bikeways, paths and streetscape improvement in downtown areas. Community Plans provide an initial vision for these enhancements which then move forward based on community stakeholder level of interest and commitment towards implementation
 - *Transportation Structures* – The County maintains just over 200 bridges. The target established by the Board is to have the bridge inventory with an average age for the structures of 50 years or less. Work involves replacement and rehabilitation of structures to meet this goal.

- Wastewater Systems – Local systems of Los Osos, Oak Shores and the Country Club are operated and maintained by the County. The standard of this area is to conform to State and Local Health and Safety Requirements and plan for life cycle replacement of the system.
- Water Systems – These facilities provide wholesale water delivery systems such as the Nacimiento Pipeline, Zone 3 Lopez Project, Salinas Pipeline and Chorro Valley Pipeline, or localized water system deliveries like Cayucos (CSA 10A), Santa Margarita (CSA 23), and Shandon (CSA 16). The standard of this area is to conform to State and Local Health and Safety Requirements and plan for life cycle replacement of the system.

Facilities Project Functional Areas

Facilities projects are grouped into functional areas consistent with the functional areas identified in the capital and maintenance project fund centers of the County budget. The functional areas are: Airports, Community Services, General Government, Golf Courses, Health and Social Services, Library, Parks, and Public Safety.

- Airports – The Airports functional area identifies projects at San Luis Obispo County Regional Airport or Oceano Airport. Projects support both commercial air service (at the San Luis Obispo Airport) and general aviation and include runways, terminals, parking for both vehicles and aircraft, hangars and other airport serving facilities. The Airports operate as an Enterprise Fund. Projects in this functional area are generally funded by Federal Aviation Administration grants and Airport operating revenues. Additional grants are sought and utilized when appropriate.
- Community Services – The Community Services functional area includes facilities located throughout the County available for use by the public, including Veteran’s Services facilities. Projects include renovations and enhancements of the facilities necessary for use by the public. These projects are generally financed by the General Fund or available grants.
- General Government – The General Government functional area includes those departments that serve other County departments such as the Administrative Office, County Assessor, Auditor-Controller-Treasurer-Tax Collector-Public Administrator, Board of Supervisors, Clerk-Recorder, County Counsel, Human Resources, Information Technology, and Public Works. Projects include renovation and enhancement of office buildings and public areas as well as storage space for records and other facilities necessary to accomplish the functions of General Government. These projects are generally financed by the General Fund or available grants.
- Golf Courses – The Golf Courses functional area identifies projects at three County golf courses: Chalk Mountain, Dairy Creek, and Morro Bay. Projects are generally financed from golf course enterprise revenues and available grants.
- Health and Social Services - The Health and Social Services functional area includes the Department of Health and Social Services Agency. Projects focus primarily on public health and mental health office space, client treatment space, and animal services renovations. These projects are generally financed by departmental operating funds when they are State of California reimbursable. In addition, projects in this functional area may be funded through the General Fund and available grants.

- Library – The Library functional area provides materials and services to people seeking knowledge and lifelong learning. Projects focus primarily on building or relocating libraries and remodeled circulation desks. Projects are generally financed from Library Public Facility Fees (PFF) or operating revenues (small projects only). Library facilities are funded (50%) by the community such as Friends of the Library organizations.
- Parks – The Parks functional area provides recreational facilities such as community parks, playgrounds, tennis courts, swimming pools, coastal access ways and beaches, large regional camping facilities, and biking and hiking trails. Projects are generally financed from grants (Federal, State and other) and Parks PFF.
- Public Safety – The Public Safety functional area includes Sheriff, Probation, Fire and District Attorney. Projects include correctional facilities, communication facilities, fire stations, patrol stations, interview rooms, office space, etc. These projects are generally financed by the General Fund, Law and Fire PFF and available grants.

Appendix 5: Facilities Planning Strategy

Public Works Facilities Planning is developing comprehensive plans to guide County capital and major maintenance projects. The goal is to develop an overall strategy with a 20-year timeline for proposed major capital projects to become more proactive, which will not only improve facilities to better support County services and staff but will also allow for better cost forecasting and more effective use of County funds. Public Works continues to collect data to understand the current conditions of County buildings while simultaneously working on long term conceptual planning for key County campuses.

These planning initiatives will accomplish several key objectives. Implementation of the conceptual plans will enhance public services, improve department adjacencies, and consolidate similar functions. Through development of new buildings and renovation of existing ones, deferred maintenance will be addressed and the Facility Condition Index (FCI) will be reduced. Results of the energy audits will propose energy efficiency and renewable projects, which will improve sustainability and reduce operating expenses. Comprehensively, these planning efforts support the County's mission to enhance the economic, environmental and social quality of life in San Luis Obispo County. The development and prioritization of these projects is explained in Appendix 8: Description of the Annual CIP Process.

Conceptual Plans:

Two key conceptual plans have been developed recently; one for the County Operations Center (COC) in 2016 and one for County buildings within the City of San Luis Obispo in 2017. As part of these major efforts, needs assessments were conducted through employee surveys, department interviews, and site visits. This information gathering helped produce growth projections by service area and calculate space needs for a 20-year outlook.

The conceptual plans will not only be used as a guideline for future development but will also help prioritize deferred maintenance and building configuration requests. The purpose is to align these initiatives to have a unified plan for capital and major maintenance expenditures. The implementation timelines for these two plans combined (Chart B) show the proposed years for design development and execution of major renovations and new building construction. The proposed major projects beyond the five-year time frame are included Appendix 7.

For the COC Master Plan, near term goals are to construct the new Animal Services facility and parking and road improvements from highway one to that new facility, as well as to develop a ground mounted solar system to offset the COC energy usage. The SLO Conceptual Plan focused on four campuses within the City of San Luis Obispo, with the goal of consolidating functions to improve public access and department adjacencies. The near term project in this plan is to construct a new Probation office building at the Johnson Avenue campus. The plan also considers and includes opportunities for revenue generation at underutilized County properties.

Facility Condition Assessments:

The largest data collection effort is the Facilities Condition Assessments (FCA) program which is a major assessment management tool providing a comprehensive evaluation of County inventory. FCA provide a means to work proactively on scheduled maintenance and assess short and long-term investment strategies, thereby defining the need for expensive capital replacement. During the past five years, FCA have been completed for all County-owned facilities. Under the FCA program departments no longer

have to submit project requests related to building condition, as the improvements to County facilities are known and will be scheduled based on their priority in the overall FCA program.

Conducting FCA involves assessing the condition of each building and categorizing the information into building system components such as roofing or HVAC. Each finding is assigned a priority based on useful life remaining, life safety compliance, etc. An objective, systematic evaluation of FCA information for all locations is conducted annually. Funding recommendations for work to be completed are made based on clear priorities and benchmarks.

Work from the FCA evaluation identifies near term replacements and repairs and develops longer term replacement of major elements such as roofing and HVAC systems. This allows staff to group work activities to develop cost effective repairs at multiple sites. It also provides a measure in which to determine the level of repair and replacements at an individual facility based on a life cycle analysis. In addition, the entire inventory of facility assets can be analyzed for the most efficient long-term investment strategy.

Data gathering under the FCA program leads to a Facility Condition Index (FCI) for each facility. The FCI is the ratio of the cost of the deficiencies to the replacement value of the building (FCI = Deficiencies Cost/Replacement Value Cost). The FCI is structured such that the lower the rating, the better relative condition of a facility. From these FCI ratings, opportunities to repair or potentially relocate facilities can be evaluated, which would lead to long term capital investments under the CIP. In some cases, the analysis may indicate the facility is not worth further investment.

The FCI condition scale and the County’s target FCI for various facility types are indicated on the chart below.

The FCI Condition Scale:

FACILITY TYPE	TOTAL BUILDING SQUARE FOOTAGE	AVERAGE ASSESSED FCI	AVERAGE CURRENT FCI (2019)	TARGET FCI
PUBLIC	817,029	9.59%	8.74%	5.00%
NON-PUBLIC	112,049	20.34%	18.07%	10.00%
REGIONAL PARKS & GOLF	125,134	11.07%	11.06%	10.00%
AIRPORTS	31,040	23.37%	23.37%	TBD

Public and Non-Public figures exclude buildings planned to be retired within the next 10 years based on the Conceptual Plan, unoccupied ancillary buildings, and County-owned buildings the County is contractually not fully responsible to maintain. County-owned new facilities such as the new San Luis Obispo Airport Terminal and the New Government Center were not assessed in the first round of assessments.

Regional Parks and Golf, and Airports are listed separately because repairs are recommended and funded under their respective fund centers. The proposed target FCI for Regional Parks and Golf relates only to

buildings and does not include other park and recreation amenities which will be surveyed in future assessments. A proposed target FCI for Airports is not identified because the new terminal was not assessed. The new terminal will be assessed during the next five-year cycle and a target FCI will be proposed at that time. A detailed breakdown by facility type can be found in Chart A.

Americans with Disability Act (ADA) Transition Plan Implementation:

ADA inspections were completed at all County building facilities, identifying barriers, to update the 1996 ADA transition plan. Like the FCA program, this work evaluated County facilities for compliance to current ADA standards and provided a long-term program to develop necessary upgrades to facilities. The new Transition Plan is complete. The findings have been prioritized in categories across the County based on the facility's essential function and frequency of use, with the first priority being path of travel. The development of this priority matrix has informed the CIP and annual budget request.

Seismic Evaluations:

Seismic evaluations of County-owned building facilities were conducted to gain a comprehensive understanding of the seismic safety and resiliency of the buildings. The findings of these assessments inform decisions regarding allocation of funds for more detailed analysis and/or voluntary strengthening retrofits, as well as development of future CIPs.

Building Security Assessments:

Assessment of building security is a current initiative which will help identify and develop capital projects going forward, similar to the programs described above.

Energy and Water Conservation:

To improve conservation and lower operating costs, Public Works has been conducting energy and water audits and benchmarking energy usage across County facilities, with the focus on developing energy efficiency and renewable energy projects. There are active energy efficiency projects such as lighting retrofits and HVAC upgrades, as well as renewable projects such as solar carport canopies at County parking lots.

Storm Water Management Plan Implementation:

The County has an established Municipal Separate Storm Water Sewer System (MS4) permit under the State Regional Water Quality Control Board which mandates control and management of site runoff at various County facilities. Efforts to implement these storm water control measures are underway and will be a component of the CIP moving forward until all required locations are addressed.

Chart A

Facility Condition Assessments Completed To-Date

The FCI Condition Scale:

PUBLIC FACILITIES

FACILITY NAME	CITY	BUILDING SQUARE FOOTAGE	REPLACEMENT VALUE	COST OF REPAIRS	ASSESSED FCI	CURRENT FCI (2019)	COST OF REPAIRS RECOMMENDED FOR FUNDING (FY20-21)	REMAINING COST OF REPAIRS	FUTURE FCI (based on proposed funding)

Note: Public and Non-Public figures exclude buildings planned to be retired within the next 10 years based on the conceptual plan, unoccupied ancillary buildings, and County-owned buildings the County is contractually not fully responsible to maintain. County-owned new facilities such as the new San Luis Obispo Airport Terminal and the New Government Center were not assessed in the first round of assessments. FCI calculations for all locations reflect condition of buildings only.

Appendix 6: Projects Completed in Calendar Year 2019

The following descriptions focus on capital and major maintenance projects which were completed in calendar year 2019. The list includes projects which have a cost of \$100,000 or greater.

FACILITY CAPITAL AND MAJOR MAINTENANCE PROJECTS

Airport Projects:

Project Title: SLO Rental Car Carwash Conversion **Total Project Cost:** \$1,536,963

Contractor: RK&G Construction

This project involved the conversion of the existing County Airport maintenance shed and shop into a carwash facility to be used by on-airport rental car companies. Conversion included placement of water and sewer connections, wash water recycle equipment, vacuum equipment, new concrete slab with drainage and wash water reclamation, and roll up overhead doors.

Project Title: Construct New Terminal **Total Project Cost:** \$38,875,654

Contractor: Q&D Construction

This project constructed a new airport terminal. The new terminal replaced an outdated and undersized terminal that had been in use for decades. The new terminal was completed and opened for operations in fall of 2018. A Notice of Completion was filed with the County Clerk-Recorder on July 17, 2018, Instrument No. 2018029109

Health and Social Services Projects:

Project Title: Health – SLO -Crisis Stabilization Unit **Total Project Cost:** \$1,199,359

Contractor: Rob Reynolds Construction

The project designed and constructed a new modular building to serve as a crisis stabilization unit for the Health Agency.

Project Title: Health – SLO -Psychiatric Facility Sallyport Entry **Total Project Cost:** \$282,677

Contractor: BC Construction and Electric

The project designed and constructed a secure sallyport entrance for the Health Agency.

General Government Projects:

Project Title: COC – Building 1202 Roof Replacement **Total Project Cost:** \$131,583

Contractor: Newton Construction

The project replaced the roof including gutters, eaves and flashing.

Project Title: FCA Repairs at the South County Ag Commissioner **Total Project Cost:** \$117,662

Contractor: JG Contracting

The project replaced the roof including gutters, eaves and flashing on the Agricultural Commissioner modular building.

Project Title: Reprographics Remodel **Total Project Cost:** \$611,574

Contractor: Newton Construction

This project renovated an empty space to house portions of the District Attorney’s Office and Public Works’ GIS and IT groups.

Library Projects:

Project Title: SLO Library Roof Replacement **Total Project Cost:** \$492,427

Contractor: JG Contracting

The project replaced the concrete tile roof at the SLO City-County Library.

Public Safety Projects:

Project Title: Sheriff West Housing Cell Door Replacement **Total Project Cost:** \$355,890

Contractor: Rob Reynolds Construction

The project replaced existing cell doors with windows with new doors having windows and hand cuff/food ports.

Project Title: Construct Creston Fire Station and Design **Total Project Cost:** \$3,855,437

Contractor: Rarig Construction

Construct new fire station and installed a ground mounted solar array on-site to offset power consumption.

Parks Projects:

Project Title: Bob Jones Pathway Octagon Barn Improvements **Total Project Cost:** \$3,653,939

Contractor: S. Chavez Construction

The project constructed the Bob Jones Pathway Staging Area at the Octagon Barn including site grading, parking lot improvements and landscaping.

INFRASTRUCTURE PROJECTS

Projects focus on capital and major maintenance improvements with a cost of \$100,000 or more.

Road and Transportation Improvement Projects

Project Title: River Grove Drive Bridge Rehabilitation **Total Project Cost:** \$ 4,303,450

Contractor: Souza Construction

The project improved a 110-year old steel truss bridge by replacing key elements and concrete decking, painting and reconstructing the bridge supports.

Project Title: Main Street Rehabilitation, Templeton **Total Project Cost:** \$ 1,835,000

Contractor: Papich Construction

Repaved Main Street from Vineyard Drive to Theater Drive. Upgraded pedestrian crosswalks and added bike lanes over length of project. Center turn lane added.

Project Title: South Bay Boulevard at Nipomo Avenue Traffic Signal, Los Osos

Total Project Costs: \$ 645,075

Contractor: Lee Wilson Electric

Installation of new signal to improve safety and operation along primary arterial road.

Project Title: Street Micro-surfacing **Total Project Cost:** \$2,427,345

Contractor: Intermountain Slurry Seal

The project provided surface treatment to approximately 60 miles of urban and rural streets in Los Osos, Cayucos, Cambria and streets west of Paso Robles. Micro-surfacing is performed to extend the road system life cycle and provide an improved ride for motorist/cyclists.

Project Title: Paso Robles Avenue Safe Routes to School

Total Project Costs: \$ 162,483

Contractor: CalPortland

The project completed sidewalk in-fill on Paso Robles Avenue between 19th Street and 22nd Street leading to Oceano Elementary School.

Flood Control and Utilities Projects:

Project Title: Arroyo Grande Creek Waterway, Phase 1

Total Project Cost: \$ 2,185,650

Contractor: David Crye General Eng. Contractor, Inc.

The project enhanced the capacity of the Arroyo Grande Creek levees by removing vegetation and creating overflow channel while retaining the natural channel and habitat. Work completed from roughly ½ mile east of 22nd Street to Meadow Creek outfall. Phase II planned for 2020.

Appendix 7: Future Projects for Consideration

The following summarizes projects that have been identified that will likely be considered beyond the current five year timeframe. Projects are at various stages of consideration and make take several years to fully develop a project scope, environmental approvals and a finance strategy which would work to place the project on the CIP. The list includes projects which generally have an estimated cost of \$100,000 or greater.

Significant Facility Projects on the horizon

The capital facility projects in the Five Year CIP are those projects which are a high priority and are feasible to implement within the five year time frame. As annual priorities are set, and emerging needs are identified, adjustments are made to the CIP. Project beyond the five year time are from a combination of the facilities conceptual plans and department service plans, which will enhance and expand services to the public.

The approach used in developing the listing of facility projects that are identified as being future considerations are as follows:

- Projects that have consistently been identified as a high priority for departments and there is a clearly defined connection to the need to maintain and enhance service levels.
- Projects which are driven by future legislative or regulatory requirements that direct changes to facilities or will impact facilities, such as changes in building code or staffing increases due to mandated expansion of services.
- Projects which have undergone a formal prioritization process, such as Parks and Recreation projects that ranked by Parks management and reviewed by the Parks and Recreation Commission.
- Projects that are included in the County Operations Center or San Luis Obispo Facility Conceptual Plans.

These project priorities will be reviewed annually for consideration of the timeframe for development or construction. It is possible that a project listed here may begin earlier than currently envisioned. Conversely, a project that is currently determined to be a high priority for future consideration may be removed from the list as emerging priorities and needs and funding sources are identified over time.

Parks

Projects currently in the plan development process are listed below. There has not been sufficient construction funding identified to move these projects forward into the CIP at this time.

Anticipated Capital Project	Description	Location
Morro Bay to SLO Connector Trail	Multi-use trail adjacent to Highway 1 between San Luis Obispo and Morro Bay.	SLO & Morro Bay
Nipomo Bluff Trail	Trail connecting the Woodlands, Jack Ready Park, and Nipomo Park.	Nipomo
Pismo to Edna Connector	Multi-use trail between Pismo Beach and Edna, in Price Canyon (part of the Anza Trail).	Pismo Beach and Edna
Class I Pathway between the Bob Jones Pathway and Pismo Beach	Multi-use trail connecting the Bob Jones Pathway to Pismo Beach, along Ontario Rd., Avila Beach Dr. and Shell Beach Dr.	Avila Beach and Pismo Beach
Avila to Harford Pier	Multi-use trail connecting Harford Pier to Avila Park (part of the California Coastal Trail).	Avila Beach
Norma Rose Park	Phase II of ~ 1.5 acre, new park in Cayucos including: play equipment; skate park; and basketball court.	Cayucos
Salinas River Trail Construction	Multi-use trail between Santa Margarita and San Miguel (Salinas River Trail -multi-agency cooperative effort).	North of Santa Margarita
Santa Margarita Lake Loop Trail	Loop trail connection around Santa Margarita Lake	Santa Margarita Lake
Vineyard East West Trail	Multi-use trail connecting Paseo Exselsus to Malvasia Court, in the Vineyard Estates area.	Templeton
East Side Oceano Park	Location property for a park to serve the community on the east side of Oceano.	Oceano

Public Safety – Sheriff

Anticipated Capital Projects	Description	Location
Sheriff’s Department Administration Facility	Construct a new Sheriff’s Administration Facility at the County Operations Center, as recommended in the COC 20-year master plan	San Luis Obispo
South County Substation	Construct 6000 sf office facility	Nipomo
IRC	Remodel approx. 8,000 sf of existing Jail IRC	San Luis Obispo
Report Room	Construct 600 sf of Report Room	San Miguel

Libraries

The following identified Library projects are beyond the five year time frame and will be considered if alternative funding from the community were identified.

Anticipated Capital Projects	Description	Location
Arroyo Grande Library	Remodel and expand existing branch	Arroyo Grande
Atascadero Library	Remodel existing branch	Atascadero
Oceano Library	Relocate existing branch	Oceano
Santa Margarita Library	Expand existing branch	Santa Margarita
San Miguel Library	Expand existing branch	San Miguel

Information Technology Department

Anticipated Capital Projects	Description	Location
Replace Communication Vaults and Towers	Replace aging communication tower which have exceeded life cycle at sites in the vicinity of Arroyo Grande, Cambria, Cuyama, Pozo, and San Luis Obispo	Various
Network fiber connectivity	Extend network fiber connectivity to various parts of the County	Various
Data cabling retrofit	Replace existing CAT 5 data cabling with CAT 6 cabling at County owned facilities.	Various

Airports

Future projects related to the two County operated airports can be found under the adopted Master Plans at the following links:

- a) San Luis Obispo Regional Airport:
<http://www.sloairport.com/wp-content/uploads/2016/09/Master%20Plan.pdf>
- b) Oceano Airport:
<http://www.sloairport.com/wp-content/uploads/2016/12/L52-Master-Plan-Full-Documnet.pdf>

General Government

Anticipated Capital Projects	Description	Location
HealthCampus	Construct a new building(s) at the Health Campus on Johnson Avenue, as recommended in the SLO Facilities Conceptual Plan	San Luis Obispo

Significant Infrastructure Projects for Future Consideration

Currently, several projects are under consideration which will lead to long term capital improvements. The development of project scope is defined through planning studies and through the interaction of various stakeholder groups. Several of these projects are vital to providing needed resources to support strategic development in communities.

The criterion for selection as a future capital project involves reviewing Board directives through the Resource Management System. Those with Level of Severity II or III are on the horizon for development of strategies and ultimate improvements. In addition, adopted specific plans, operational plans and programs provide a priority listing of project need and priority. The Integrated Regional Water Management Plan is an example of a planning document from which priorities are established among the various stakeholders. Based on available funding, these projects are advanced to development. Budgetary performance goals adopted by the Board define which projects need to be undertaken to keep the infrastructure maintained and operational.

In 2014, the Board of Supervisors also adopted an infrastructure needs assessment for the communities of San Miguel, Templeton, Oceano and Nipomo under the “Complete Community Survey” study. Implementation of targeted infrastructure to close identified gaps is sought to provide and promote in-fill development in these communities and enhance livability.

The Board has also sought to look toward housing growth and potentially invest in those areas which can best support future development. An on-going work effort will be working towards adding the necessary infrastructure to foster that growth; whether within cities or unincorporated areas.

The key to advancing these identified projects is funding. While State and Federal grants are pursued, funding under those programs are unpredictable and ideally pursued with local matching funds. Discussion with stakeholders on funding options and implementation will be needed to advance regional water supply or address localized utility service needs. To address new system demands from development, alternatives to traditional fee programs should be considered. These include use of the Statewide Community Improvement Program financial package and specific Board created Community facilities Districts under current policy.

Some of the foreseeable projects not in the current CIP include:

Water Supply Projects

Anticipated Capital Projects	Description	Location
Groundwater Implementation	Options to Enhance Supply	Medium/ High priority basins
CSA7A Wastewater Interceptor Project	Reroute/improve trunk lines	Oak Shores

Flood Control Projects

Anticipated Capital Projects	Description	Location
Parking Lot Culvert Outfall	Provide Pumping System	Avila Beach
Olde Town Nipomo Drainage	Detention Basin/Storm Drain	Nipomo

Transportation Projects

Anticipated Capital Projects	Description	Location
Route 101/166 Interchange	Intersection Operations	Nipomo
Las Tablas Avenue/Route 101 Interchange	Phase II intersection operations	Templeton
South Oakglen Secondary Access	Southland/101 Interchange	Nipomo
Halcyon Road Grade widening	Segment between Route 1	Nipomo
Orchard Road widening	Bike lane additions	Nipomo

Public Works will continue to engage communities and stakeholders on these projects to determine scope and funding mechanisms. Outreach with Community Service Districts, Economic Vitality Corporation and Homebuilders Association will provide input on future community infrastructure priorities. Criteria developed in implementation of Prop 1 for water resources will also reflect which projects are most viable to advance

The implementation of the recently enacted Statewide Groundwater Management Act (SGMA) may also be a significant component in determining the future project list. As specific groundwater sustainability plans are developed for the high and medium priority basins in the County, those infrastructure needs should become more defined.

Appendix 8: Description of the Annual CIP Process

The following summarizes the annual process to identify and recommend capital and major maintenance projects to the Board of Supervisors for the annual County budget and the County Five Year Capital Improvement Plan. The Planning and Building Department is consulted to ensure projects align with land use policies and goals.

Each project of the Five-Year CIP is described on a one-page project sheet which identifies the project scope, project justification, estimated cost, and existing or potential funding sources. This page is linked to a summary sheet which lists all projects on the Five-Year Plan.

Facilities:

Facility capital and maintenance projects are categorized into three distinct groups and have specific development tracks and/or funding models that will drive how projects are ranked, budgeted, programmed and implemented.

BUILDING CONDITION ¹	BUILDING CONFIGURATION ²	CONCEPTUAL PLANS
Facility Condition Assessment Americans with Disabilities Act Stormwater Compliance Seismic Evaluations Energy Conservation	Annual Department Requests Relocation Remodel	Five Year CIP Document SLO Facilities Conceptual Plan COC Conceptual Plan

- BUILDING CONDITION** – County Building conditions are identified through various types of assessments and evaluations. The major work effort that is objectively analyzing the physical condition of nearly all County-owned facilities. Referred to as the Facility Condition Assessment (FCA) process, each building will have a Facility Condition Index (FCI) and a comprehensive list of deficiencies which become prioritized based on the nature of the issue. The objective is to allocate funds to facilities that strategically addresses the most severe problems, and over time results in an acceptable County-wide FCI level. The FCA process will be a permanent function of the County’s facilities management program. Once an acceptable FCI is obtained, facilities would continue to be assessed and projects would be budgeted based on maintaining the desired FCI.

Concurrently, the Americans with Disabilities Act (ADA) Transition Plan has been updated, which identifies where the County needs to invest to ensure that our services and programs are ADA-compliant. The ADA Transition Plan will be the guideline for annual ADA project

¹ Examples of Building Condition-related projects include repairs, replacements or upgrades to facility components, which may include but are not limited to HVAC, roofing, windows, flooring, electrical, and parking area that are meant to maintain and/or preserve the value of an existing asset or meet legal mandates.

² Examples of Building Configuration-related projects include improvements that meet the needs of a tenants’ services or programs, which may include but are not limited to remodels, adjusting interior spaces/walls, footprint expansions, and new structures.

development, and Public Works will implement these barrier removal projects as funds becomes available.

Collectively, the FCA, ADA, stormwater and energy programs will eliminate a department's need to make annual requests for projects relating to the condition of buildings.

- *BUILDING CONFIGURATION* –The intent of the building configuration category is to provide a mechanism for departments to request projects on an annual basis that enhance their services or programs, such as remodels and relocations, among others.
- *CONCEPTUAL PLANS*– County conceptual plans are long range plans, providing overall strategy for County building facility development to support growth projections. Major building projects are included in the Five-Year CIP based on the implementation timelines of these plans. Appendix 5 provides description of the plans completed to date and proposed project implementation timelines.

The annual Five-Year CIP update process begins in July, when the Public Works Department sends a request for projects to all departments. Departments submitting requests use electronic forms to describe and justify their requested project.

Facility capital projects requested for inclusion in the annual budget or the Five-Year CIP, under the building configuration group, are reviewed by the membership of the Capital Improvement Executive Steering Committee (CI-ESC). Bringing together the County Administrative Office, Public Works Department, Parks & Recreation Department, Airports Department, and the Planning and Building Department allows a broader range of input into the capital project selection early in the process. Joint evaluation of projects helps increase internal awareness of how one project may impact another. It also allows for greater consideration of land use policies and goals and increases coordination of potential funding opportunities.

Each building configuration project considered for inclusion in the annual budget and/or Five-Year CIP is rated on the following criteria based on the Board of Supervisors budget policies.

- Health and Safety (20%)
- Legal Mandates (20%)
- Strategic Planning Efforts (15%)
- Board Approved Services and Programs (15%)
- Operational Costs (10%)
- Project Funding (20%)

Once a working group completes the task of scoring projects, based on the above criteria, and analyzes staff capacity to deliver the requested projects, a recommended list is presented to the CI-ESC. The CI-ESC reviews the annual listing of projects for the Five-Year CIP. The CI-ESC review of projects increases the transparency of how capital projects are identified and recommended. The CI-ESC does not determine budget. The CI-ESC evaluates capital improvement investment opportunities from a County-wide perspective and recommends projects for potential funding.

This CI-ESC is chaired by the County Administrator and includes the following membership.

- Director, Public Works, and ESC Vice-Chair
- Director, Airports
- Director, Health Agency
- Director, Library
- Director, Planning & Building
- Director, Parks & Recreation
- Director, Social Services
- Director, Central Services
- Auditor-Controller-Treasurer-Tax Collector-Public Administrator
- Chief Probation Officer
- Fire Chief
- Sheriff-Coroner
- District Attorney

Infrastructure:

Public Works staff develop needs assessments for the infrastructure functional areas to set priorities and match them with available funding. Infrastructure projects are also reviewed by various technical advisory groups and community advisory councils which provides a forum for the project need, scope, project development activities and project funding.

Members of the Public Works Department also engage the San Luis Obispo Economic Vitality Corporation's Building, Design and Construction business cluster to discuss overall infrastructure needs, funding and alignment of priorities to facilitate overall economic development consistent with the adopted General Plan.

Appendix 9: Funding and Policy Considerations

Capital Improvement Funding Sources

Funding capital and major maintenance projects is a challenge faced by all governmental entities charged with developing and maintaining facilities and infrastructure. This plan is focused on the potential financing of capital projects which will be considered for development within the next five years. The funding sources identified are those which are known and have historically been used to develop capital projects. The following sub-sections identify potential funding sources used in this plan.

Facility Capital Improvement Policies and Guidelines:

The Board of Supervisors has adopted specific policies that guide the budgeting for capital projects. The policies are included in the Budget Development Policies, annually reviewed and approved by the Board at the beginning of each annual cycle for the preparation of the County budget. Below is the section of the Budget Development Policies that specifically address capital projects.

Library Projects: Consider funding new library buildings or major improvements to existing libraries only if at least 50% of the cost of the project is provided by the community in which the facility is located. The funding required from the community may be comprised from a variety of sources, including grants, school districts, special districts, cities, community group funding, private donations, or fees generated for specific use in libraries. The County's portion of this funding formula will be financed from the Library budget (FC 377), grants, gifts, the General Fund or fee revenues generated for specific use in libraries.

Maintenance Costs: Consider cost of ongoing maintenance before recommending capital projects, acquisition of additional parklands or beach access way projects.

Master Plans: Consider approving projects included in master plans if they have their own funding sources or if they are requested from other sources which identify an operational need for the facility.

Building Efficiency: Projects should utilize energy and resource efficiencies such as “green building” (LEED) and Low Impact Development (LID) techniques and strategies to reduce ongoing utility and maintenance costs.

Grant Funded Capital Projects: For grant funded projects, when a County match is required, budget only the County share if receipt of grant money is not expected in the budget year. If there is a reasonable expectation that the grant revenue can be received during the budget year, budget the entire project amount including revenues.

Encumbrances: The Auditor-Controller is authorized to encumber capital project money appropriated for a specific capital project at the end of each fiscal year, if work has been undertaken on that project during the fiscal year. Evidence that work has been undertaken would be in the form of an awarded contract or other item upon which the Board of Supervisors has taken formal action.

Phasing of Large Projects: For capital projects which will be undertaken over several fiscal years, develop full project scope and costs in the initial year.

Facility Condition Assessments: Continue the ongoing assessment of the maintenance needs of County facilities, and consider funding critical and potentially critical projects as identified.

Americans with Disabilities Act (ADA): Consider funding a portion of the projects identified in the County's ADA Transition Plan update.

Facilities Project Funding Sources

There are a variety of funding sources used to pay for the cost of developing County facilities. The Board of Supervisors budget policies emphasizes development of projects which are 100% revenue offset or have their own funding source. County functions which are enterprise funds, such as the County Airports, Regional Parks and County Golf Courses, are expected to utilize their own funding for capital and maintenance improvements. By Board policy, Library projects (except for deferred maintenance) are to be funded with 50% of the cost coming from the community in which the library improvements are proposed.

Public Facility Fees (PFF) provide funding for five areas:

- General Government;
- Law Enforcement;
- Fire Protection;
- Libraries; and
- Parks.

Fee Revenues are dependent upon fees charged to new development projects and expended through the AB1600 mitigation program, adopted by the Board. They cannot be used for operations or maintenance expense. The General Government PFF revenues are committed to pay for a portion of the debt financing for the New Government Center.

Budget adjustments from a fund source for a specific capital project are authorized through Board of Supervisors actions. The balance of Capital Project reserve funds fluctuate with use and replenishment.

The following table identifies funding sources matched to the functional areas for projects. The funding sources in the table are those that are most commonly applied to capital and major maintenance projects for the facilities developed within the functional area.

Functional Area	Funding Source
Airports	Federal Aviation Administration grants and entitlements Passenger Facility Fees Customer Facility Fees Airport Enterprise Revenues
General Government & Community Buildings	General Government Building Replacement Reserves General Government Public Facility Fees General Fund Grants when available State of California Courts (49.74%)
Golf Courses	Golf Course Enterprise revenues Parks Reserves Golf operating budget Grants when available Donations and Sponsorships
Health and Social Services	Health operating budget DSS operating budget General Government Building Replacement Reserves General Fund Grants when available
Library	Library Public Facility Fees Library Reserves Library operating budget 50% funding from the community
Parks	<u>Community Parks</u> Parks Public Facility Fees Quimby Fees Community Parks operating budget General Fund Grants when available Donations and Sponsorships <u>Regional Parks</u> Parks Public Facility Fees Quimby Fees Special Revenue Accounts Parks Reserves Regional Parks operating budget Grants when available Donations and Sponsorships
Public Safety	Law Enforcement Public Facility Fees Fire Protection Public Facility Fees Operating budgets – Sheriff, Fire, Probation District Attorney Asset Forfeiture Funds General Fund Grants when available Funding authorized by state legislature

Infrastructure Project Funding Sources

Infrastructure requires a multitude of funding sources to advance projects to final construction. The County seeks out several funding opportunities for project implementation. Nonetheless, there are certain core funding sources from which Public Works will advance projects. These are broken down into particular functional areas per the table below.

As we look ahead toward future public works infrastructure projects, we would expect to see a “normal” CIP delivery develop in the range of \$ 14-16 million annually. Roughly half of that amount geared towards major road maintenance work and bridge replacement projects under SB1 state funding and Federal Highway Bridge Program funding respectively.

Transportation funding to address increased development is provided under the Road Improvement Fee (RIF) program administered in the following eight communities:

- North Coast
- Los Osos
- Avila Valley
- Nipomo (South County)
- Templeton
- San Miguel
- Nacimiento
- Route 227

Road Improvement Fees are applied to new development within the aforementioned communities and are adopted under an AB1600 mitigation program adopted by the Board. Funds generated cannot be used for maintenance and operation expenses, but only for expansion of the transportation system to address increased traffic volumes. These fund accounts are often supplemented by grants through San Luis Obispo Council of Governments (SLOCOG).

Utility improvements are funded primarily through rates and charges of the customers. Both for wholesale and retail operations. Small community improvements are typically financed through USDA loans or grants for rural communities.

Flood control improvements are based on established flood control districts or potential newly formed districts, as defined by policies of the San Luis Obispo County Flood Control and Water Conservation Board, or with occasional grants received under various State and Federal programs administered by CalOES and FEMA.

The following table identifies funding sources matched to the functional areas for projects. The funding sources in the table are those that are most commonly applied to capital and major maintenance projects for the facilities developed within the functional area.

Functional Area	Funding Source
Water Systems	Rates and Charges of County Service Areas USDA Grants California Department of Public Health Grants Flood Control Zone 3 – Lopez Prop 1 Grants Prop 84 Grants Nacimiento Fund Flood Control – State Water Project
Wastewater Systems	Rates and Charges Assessment Districts (New system improvements) USDA Grants California Department of Public Health Grants Prop 84 Grants
Flood Control	Flood Control District – General Flood Control District Zones 1/1A , 4, 9, and 16 Assessment Districts (New system improvements) Prop 1E infrastructure bonds Prop 84 Low Impact Development Grants FEMA Hazard Elimination Grants
Transportation	
Road Preservation	Road Fund – General Fund Support for road maintenance SB1 Road Maintenance and Repair Fund Transportation Development Act Funds Highway Users Tax Account (Gas Tax)
Road Safety	Federal Highway Safety Improvement Program Grants Active Transportation Program (Caltrans – CTC) Regional State Highway Account Fund (SLOCOG) Road Fund
Road Structures	Federal Highway Bridge Program Fish Passage Enhancement Grant Programs Road Fund
Road Capacity	Road Improvement Fees State Transportation Improvement Program (SLOCOG) Regional/Urban State Highway Account Funds (SLOCOG) Federal Congestion Management Air Quality Funds
Betterment	Active Transportation Program (Caltrans – CTC) Regional/Urban State Highway Account Funds (SLOCOG) Federal Congestion Management Air Quality Funds
